# GENERAL MATERIAL SPECIFICATIONS

## EXTERIOR FINISHES STANDARD/ MINIMUM REQUIREMENTS

| PARAMETER  | REQUIREMENTS / PREFERRED  | REMARKS  |
|--|---|--|
| <b>Cladding / Façade Treatment</b>               | Aluminum Composite Cladding<br>  | Structural performance: provide exterior/interior wall cladding assemblies capable of withstanding the effects of load and stresses from dead loads, wind loads, and normal thermal movement without evidence of permanent defects and stains of assemblies or components. Sealed joints shall allow free and silent movement of panels during expansion and contraction while preventing uncontrolled penetration of moisture. Submit shop drawings and samples for approval. |
| <b>Walls (Interior and Exterior)</b>             | Combination of Cement finish with masonry coating/sealer and Acrylic Solvent-based paint on colored areas.<br>   | Walls shall be made of pre-cast / pre-fabricated walls. Lightweight, higher compressive strength, sound insulation, fire, water and moisture resistant. Finishes shall be a combination of limewash and wall paint (acrylic solvent-based coating). Accent walls should be combination of colors blue and wood veneers. Employer/ TESDA approved color for other areas.  |
| <b>Waterproofing for roof decks and canopies</b> | Two or multiple component, flexible cementitious waterproofing membrane.<br>Proved concrete topping as additional layer<br>Torch-membrane application is not recommended and allowed  | Contractor to conduct a demo before actual application and/or approval. Minimum warranty of five (5) years.  |
| <b>Curtain Walls, Windows and Glass</b>          | As per manufacturer/suppliers' recommended specifications given the height<br>Use of 12mm thk. Clear, Tempered Glass for glass doors. Powder-coated aluminum framing; Employer-approved color / shade.<br>For areas facing South and West, apply Clear Glass Coating with 0.61 Solar Heat Gain Coefficient and an 86% Ultraviolet (UV) Deflection. 76% visible light transmission and 47% glare reduction.<br> | Contractor to submit shop drawings and samples for approval of employer / TESDA  |
| <b>Roofing (for selected areas)</b>              | Ga. 24 Pre-Painted Rib-type/corrugated roofing with double sided roof insulation (polyethylene foam):<br>Gauge of Sheetting      Spacing of Laths<br>26                              450 mm – 600 mm<br>25                              600 mm – 750 mm<br>24                              600 for nails, 900 mm for screws   | Can withstand Signal 4-5 typhoons.   |
| <b>Exterior Flooring</b>                         | Non-Skid Cement tiles (80cmx80cm or larger) and pavers<br>   | Contractor to submit samples for approval. 2.0mm max grouting width should and match the color of the tiles..  |
| <b>PWD Ramp</b>                                  | Refer to BP 344   | Stainless Steel Railiig, Tactile Blocks  |
| <b>Canopies (Glass)</b>                          | High Impact, wind load resistant and translucent glass canopies with structural framing. Complete with structural framing and sealants  | Toughened, laminated glass, shatter proof and has a high tensile strength to protect against cracking and breaking.  |
| <b>Louvers (Sun-Shading)</b>                     | Aluminum Louvers<br>   | Can withstand Signal 4-5 typhoons. Complete with framing and accessories. Check angle and position with the building orientation   |

Contractor to submit samples and shop drawings for approval

| <b>Size / Floor Area</b>                      | <i>Refer to schematic floor plan / tabulation</i>   |   |
| <b>Flooring</b>                               | Polished Concrete<br>   | 5- 7 steps process. Employer/ TESDA to approved final color, size of aggregates. Check final floor elevation. Avoid topping less than standard height (50mm or above); Satin Finish / Sheen, Non Slip |
| <b>Ceiling</b>                                | Acoustic Ceiling Panels / Tiles<br>  | NRC - 1.00; Concave Edges/Runners; White, 60cm x 60cm or 120cm x 60cm   |
| <b>Walls</b>                                  | Tempered Glass Walls and Doors and Operable wall<br>  | 1. Fronting Co-Working Space: Tempered Glass Walls with Frosting Decal (Cuts and Design for approval)<br>2. Between rooms: Movable or Operable Partition with Acoustic properties                     |
| <b>Lighting</b>                               | 400-750 Lux<br>LED lighting, (Power-saving)<br>Recessed Lighting  | Employer/ TESDA to approve design and colors of casing  |
| <b>Curtain Walls, Windows and Glass Doors</b> | As per manufacturer/suppliers' recommended specifications given the height<br>Use of 12mm thk. Clear, Tempered Glass for glass doors.<br>For areas facing South and West, apply Clear Glass Coating with 0.61 Solar Heat Gain Coefficient and an 86% Ultraviolet (UV) Deflection. 76% visible light transmission and 47% glare reduction.<br>Powder-coated aluminum framing; Employer-approved color / shade.<br> | Contractor to submit shop drawings and samples for approval of employer / TESDA   |
| <b>Window Treamtent (Roller Blinds)</b>       | Single-colored (cream or light gray), PVC sunscreen-type roller blinds with 5% openness factor  | Employer/ TESDA to approved-color   |

Contractor to submit samples and shop drawings for approval

# **RTIC Focal Area Showcase Components and Innovation Makerspace Specifications**

# Components of the Intelligent Cold Chain Showcase @ RTIC TUGUEGARAO

- **Automated Storage and Retrieval Systems (AS/RS):** Systems can automatically store and retrieve goods in a temperature-controlled warehouse.
- **Intelligent Refrigeration Units:** These are storage units that automatically adjust their temperature based on the type of products stored and outside environmental conditions.
- **IoT-enabled Temperature and Humidity Sensors:** Sensors collect real-time data about the conditions inside storage and transportation units and alert on failure of chiller units.
- **AI-powered Cold Chain Management Software:** Software can analyze real-time data from IoT devices, predict potential issues, and provide actionable insights for improving cold chain operations.
- **Energy-Efficient Equipment:** Energy-efficient refrigeration units, vehicles, and other equipment to reduce the environmental impact of the cold chain.
- **Automated Guided Vehicles (AGVs) and Autonomous Mobile Robots (AMRs):** Vehicles can transport goods within a warehouse without human intervention.
- **Intelligent Transport Systems:** Monitor and control the conditions inside a vehicle during transportation, and reroute the vehicle based on weather conditions and traffic.
- **Cloud Computing Solutions:** For storing and analyzing large amounts of data from IoT devices and other sources.
- **RFID and NFC Technology:** Radio-Frequency Identification (RFID) and Near Field Communication (NFC) tags can provide real-time tracking of goods in the cold chain.
- **GPS Tracking and Geofencing Tools:** Tools that provide real-time location tracking of goods in transit and alert managers if a vehicle moves out of a predefined geographical area.
- **Smart Packaging Solutions:** Packaging with built-in sensors that can monitor the condition of the product and transmit this data to a centralized system.
- **Drones with Temperature-Controlled Compartments:** For last-mile delivery of temperature-sensitive goods.
- **Augmented Reality (AR) Devices:** AR can help with maintenance of equipment, navigation within warehouses, and training of staff.
- **Blockchain Technology:** Blockchain can be used for secure and transparent data sharing across the cold chain.
- **Machine Learning and Predictive Analytics Tools:** These can analyze historical data to predict future demand, optimize inventory levels, and improve route planning.

# General Specification for Makerspace @ RTICs

| Parameter                        | Norm  | Remarks |
|----------------------------------|---|---------|
| Electrical Loading Requirement   | 3-phase power supply for conventional mill, turn, grinder<br>Each mill, turn, grind 15 KVA and each machine assembly project station 2 KVA<br>16A electrical socket outlet should be provided for general use in the workshop<br>All electrical installation should comply with local regulations |         |
| Floor Requirement                | Project work and storage area:<br>12 KN<br>300 mm concrete<br>2 coats epoxy industrial paint<br>Raised floor at least 350 kg/m <sup>2</sup><br>Vinyl composition to reduce dust and improve electrical insulation   |         |
| Lighting Requirement (Lumen)     | Standard ceiling flourescent lightings at 25 W/m <sup>2</sup><br>Emergency lights   |         |
| Building Safety Code Requirement | Comply with national safety code requirements   |         |
| Door Width                       | At least 1.5 m wide   |         |

A = ampere, D = dimensional, kg/m<sup>2</sup> = kilogram per square meter, KN = kilonewton, kVA = kilo volt ampere, m = meter, mm = millimeter, W/m<sup>2</sup> = watt per square meter.

## Equipment, Furniture and Electricals Recommendations for Cold Storage Focus

## 1. Multi-Disciplinary Heavy Fabrication Workshop – Level 1

| Equipment Category   | Detailed Equipment   | Equipment Description   | Quantity |
|----------------------|--|---|----------|
| 1. CNC Equipment     | CNC Milling Machine  | Computer controlled milling machine for precise cutting and shaping | 1        |
| 2. Lathes            | Metal/Wood Lathe   | Machine for shaping metal   | 1        |
| 3. Mill/Router       | Metal/Wood Mill/Router   | Used for hollowing out an area in a piece of wood                   | 1        |
| 4. Brazing Equipment | <ul style="list-style-type: none"> <li>Brazing Torch Kit</li> <li>Brazing Rods</li> <li>Flux</li> <li>Fire-Resistant Mat/Blanket</li> <li>Safety Gear</li> <li>Vice/Clamps</li> <li>Acetylene and Oxygen Tanks</li> <li>Cylinder Cart</li> <li>Refrigeration Tubing</li> <li>Tube Cutter</li> <li>Tube Bender</li> <li>Tube Brushes/Tube Cleaning Kit</li> </ul>   | Comprehensive Brazing station                                       | 1        |
| 5. Hand Tools        | <ul style="list-style-type: none"> <li>Screwdrivers Set Variety of sizes and types (Phillips, flathead, etc.)</li> <li>Pliers Set Variety of types (needle-nose, slip-joint, etc.)</li> <li>Wire Cutters For cutting and stripping wire</li> <li>Precision Knife For fine cutting and trimming tasks</li> <li>Hammers Various types for different tasks (claw hammer, ball-peen hammer, etc.)</li> <li>Saws</li> </ul> | Basic set of hand tools for various tasks                           | 1        |
| 6. Drilling Tools    | Bench Drill Press  | Stationary drill for precise hole placement                         | 1        |
|                      | Band Saw   | For cutting wood or metal   | 1        |
|                      | Circular Saw   | Portable saw for cutting wood                                       | 1        |
|                      | Jigsaw   | Portable saw for cutting curves                                     | 1        |

|                       |  |  |         |
|-----------------------|--|--|---------|
|                       | Metal Shear  | For cutting sheet metal  | 1       |
| 7. Bending Tools      | Metal Bender   | For bending metal rods and bars  | 1       |
|                       | Sheet Metal Brake  | For bending sheet metal  | 1       |
| 8. Measurement Tools  | <ul style="list-style-type: none"> <li>• <i>Callipers</i></li> <li>• <i>Micrometer</i></li> <li>• <i>Ruler</i></li> <li>• <i>Square</i></li> <li>• <i>Protractor</i></li> <li>• <i>Tape Measure</i></li> </ul> | Comprehensive measurement tools set  | 2       |
| 9. Safety Equipment   | <ul style="list-style-type: none"> <li>• <i>Eye Protection</i></li> <li>• <i>Ear Protection</i></li> <li>• <i>Dust Masks</i></li> <li>• <i>Fire Extinguisher</i></li> </ul>                                    | Safety equipment for various tasks   | 10 sets |
| 10. Other Tools       | Sanding Machine  | For smoothing and finishing wood and metal   | 1       |
|                       | Bench Grinder  | For sharpening tools and grinding metal  | 1       |
|                       | Belt Sander  | For smoothing and finishing large surfaces   | 1       |
|                       | Clamping Tools Set (C-clamps, Bar Clamps, Bench Vice)  | For securely holding workpieces  | 1       |
| 11. Compressor/Vacuum | Industrial Air Compressor  | An air compressor capable of providing the needed air pressure and flow for a CNC machine. |         |
|                       | Industrial Vacuum System   | A vacuum system designed for use with a CNC machine.                                       |         |
| 12. Consumables       | CNC Milling Bits   | For use with the CNC machine   | 10      |
|                       | Lathe Cutting Tools  | For use with the lathes  | 10      |
|                       | Router Bits  | For use with the router  | 10      |
|                       | Drill Bits   | For use with the drill press   | 20      |
|                       | Band saw Blades  | For use with the band saw  | 5       |
|                       | Circular Saw Blades  | For use with the circular saw  | 5       |
|                       | Jigsaw Blades  | For use with the jigsaw  | 10      |
|                       | Sandpaper  | For use with the sanding machine and belt sander   | 50      |
|                       | Grinding Wheels  | For use with the bench grinder   | 5       |
|                       | Screws, Nails, Fasteners   | Assorted sizes and types for various projects  | 100     |

## Furniture

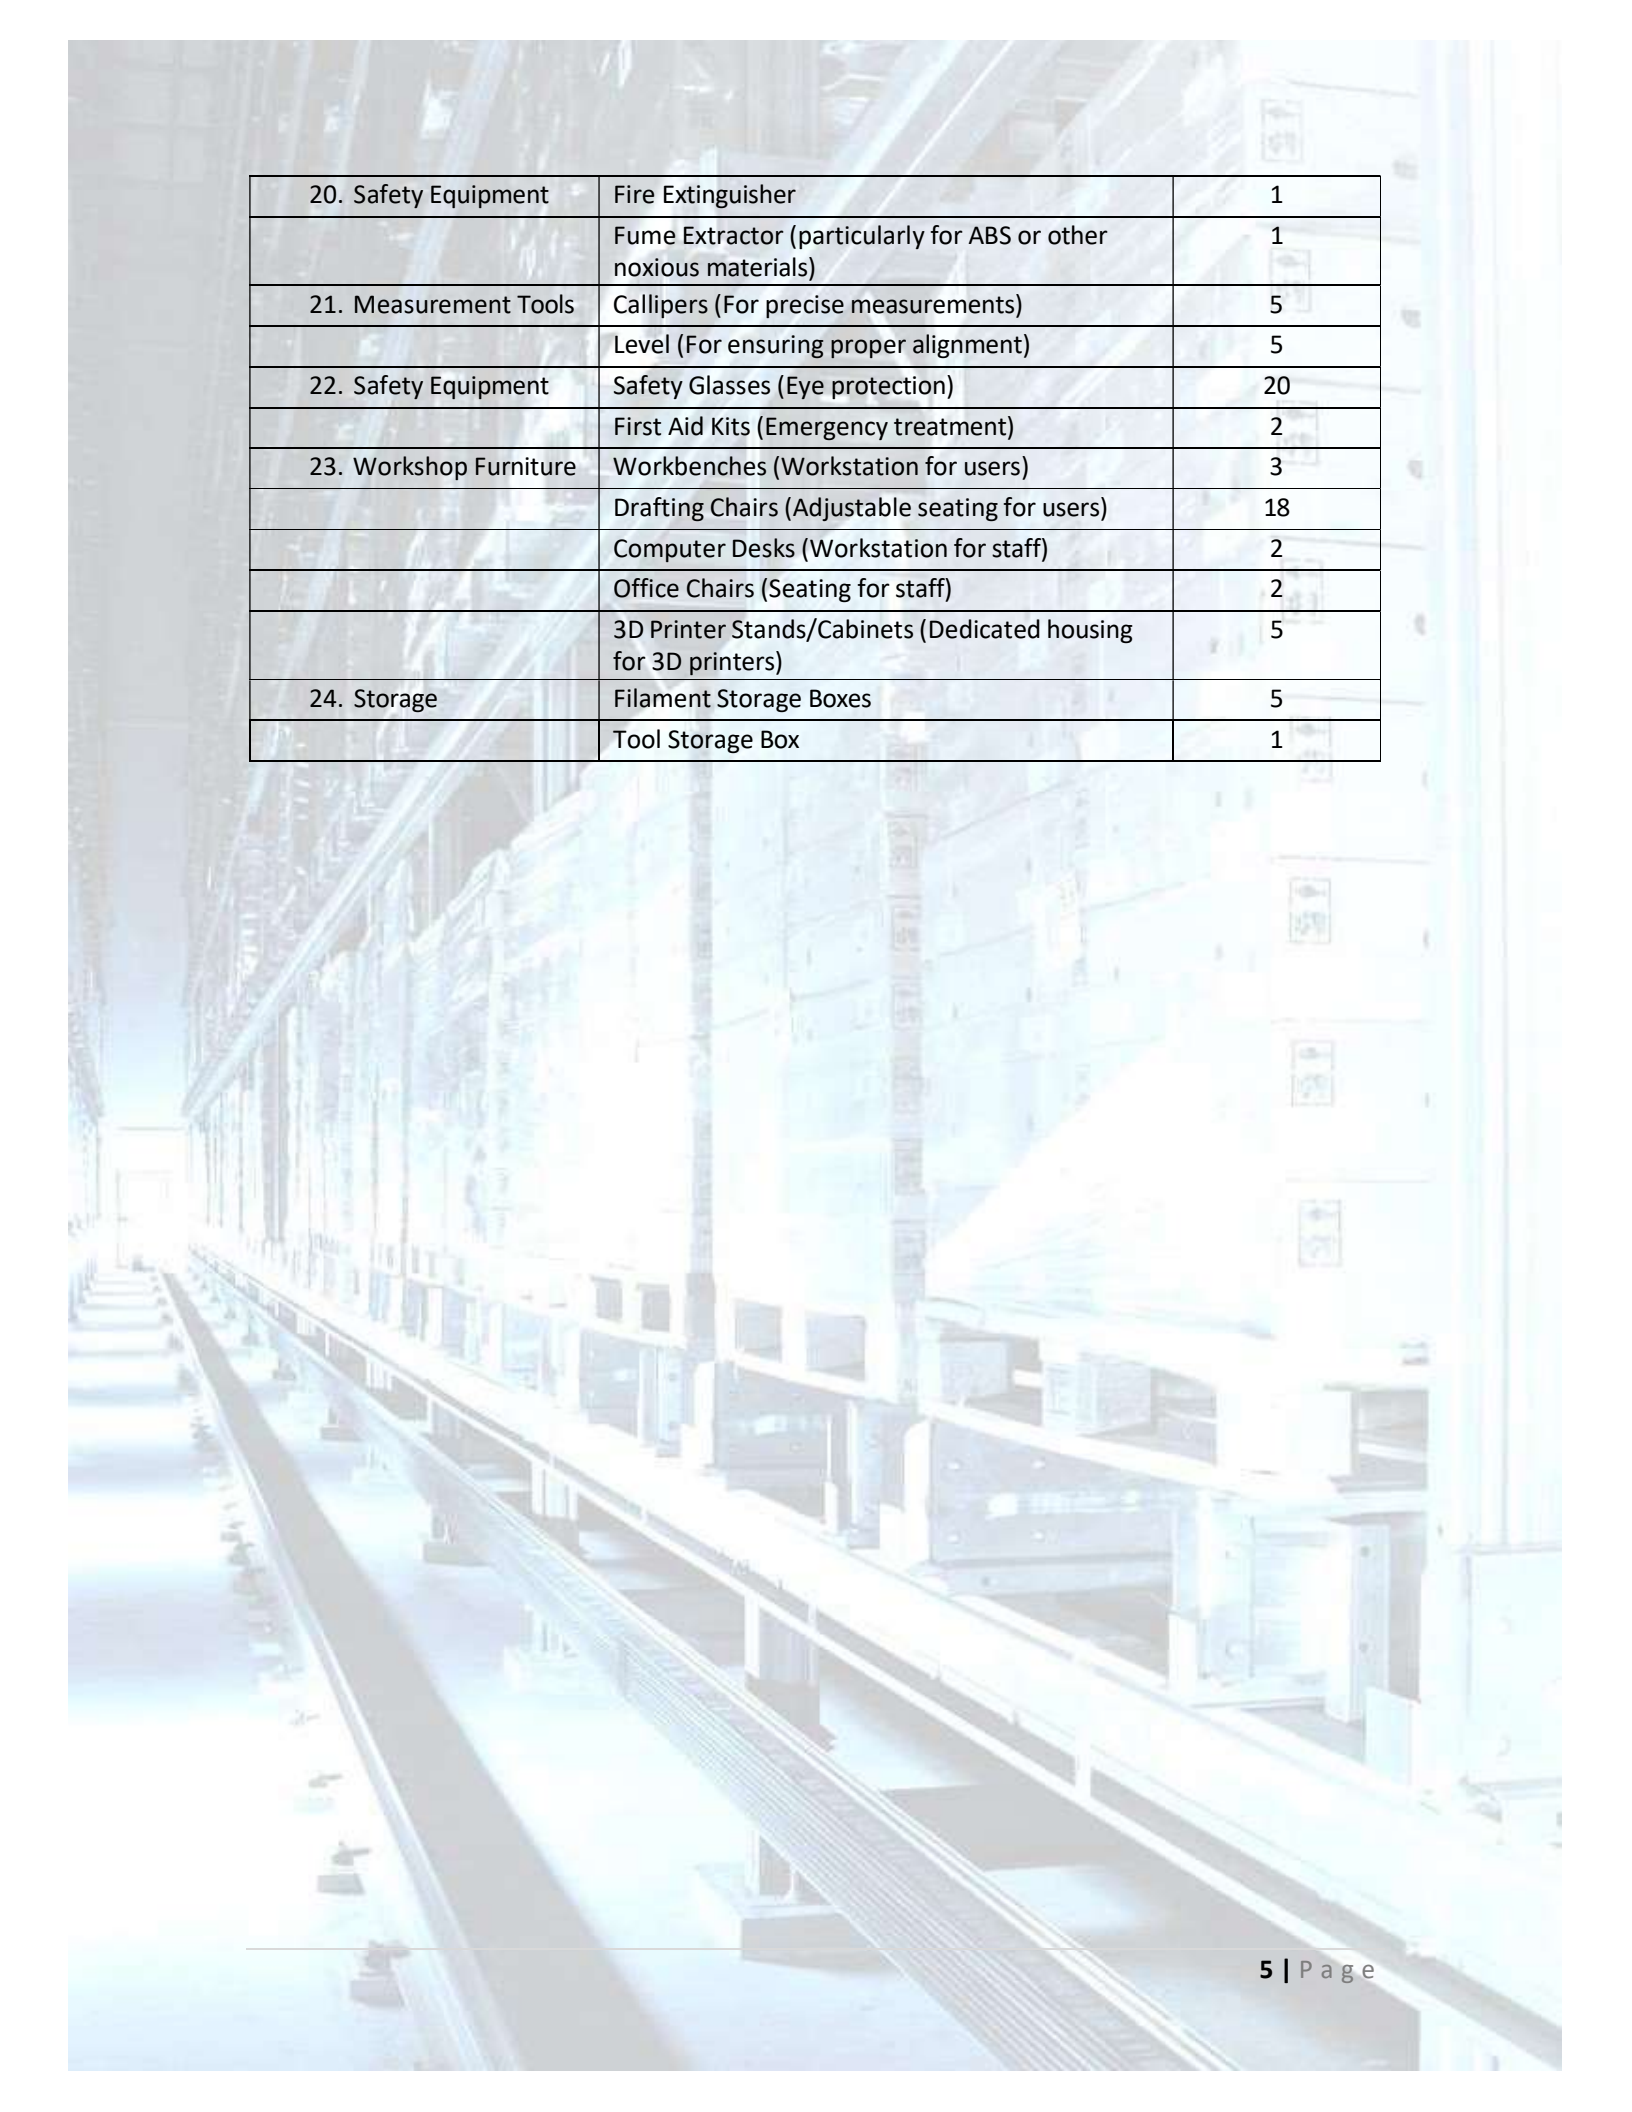

| Category  | Detailed Equipment     | Equipment Description                    | Quantity |
|-----------|------------------------|--|----------|
| Furniture | Workbenches            | Heavy-duty tables for performing work    | 3        |
|           | Storage Cabinets       | For securely storing tools and materials | 2        |
|           | Chairs                 | For sitting while working                | 20       |
|           | Tool Chests            | For organizing and storing small tools   | 2        |
|           | Shelfing (3D Printers) | For 3D Printers                          | 2        |

## Electrical Outlet Points

| Equipment Category | Detailed Equipment            | Equipment Description  | Quantity |
|--------------------|-------------------------------|--|----------|
| Electrical Outlets | 240V Single Phase Outlet      | Standard wall outlets for various tools and machines                                   | 16       |
| Electrical Outlets | 415V Three Phase Outlet       | High-capacity outlets for heavy machinery like the CNC machine and welder              | 5        |
| Electrical Outlets | 240V GFCI Single Phase Outlet | Ground fault circuit interrupter outlets for safety for CNC, Milling, Lathe and Router | 4        |
| Total Outlets      |                               |  | 24       |

## 2. Work Fabrication Area – Level 1

| Equipment Category      | Equipment Description  | Quantity |
|-------------------------|--|----------|
| 13. 3D Printers         | High-Resolution 3D Printers (For prototyping and model creation) | 5        |
| 14. Filament            | PLA Filament (standard for most general-purpose printing)        | 10       |
|                         | PLA Filament (standard for most general-purpose printing)        | 10       |
|                         | Specialty Filament (flexible, wood-infused, metal-infused, etc.) | 10       |
| 15. Printer Maintenance | Print Bed Surface  | 2        |
|                         | Replacement Nozzles  | 5        |
|                         | Cleaning and Scraping Tools                                      | 2        |
| 16. Design Software     | CAD Software License (like Tinkercad, Fusion 360)                |          |
| 17. Computers           | Computers (For 3D modelling, research, etc.)                     | 2        |
| 18. Post-processing     | Deburring Tools  | 2 sets   |
|                         | Sandpaper Assortment   | 2 sets   |
| 19. Laser Cutter        | High Resolution Laser Cutter                                     | 1        |

|                        |  |    |
|------------------------|--|----|
| 20. Safety Equipment   | Fire Extinguisher  | 1  |
|                        | Fume Extractor (particularly for ABS or other noxious materials) | 1  |
| 21. Measurement Tools  | Callipers (For precise measurements)                             | 5  |
|                        | Level (For ensuring proper alignment)                            | 5  |
| 22. Safety Equipment   | Safety Glasses (Eye protection)                                  | 20 |
|                        | First Aid Kits (Emergency treatment)                             | 2  |
| 23. Workshop Furniture | Workbenches (Workstation for users)                              | 3  |
|                        | Drafting Chairs (Adjustable seating for users)                   | 18 |
|                        | Computer Desks (Workstation for staff)                           | 2  |
|                        | Office Chairs (Seating for staff)                                | 2  |
|                        | 3D Printer Stands/Cabinets (Dedicated housing for 3D printers)   | 5  |
| 24. Storage            | Filament Storage Boxes   | 5  |
|                        | Tool Storage Box   | 1  |

### 3. Cold Storage and Packaging Area – Level 1

| Equipment/Item                           | Description  | Quantity |
|--|--|----------|
| 25. Walk-in Freezer Unit                 | This will be the main freezing unit for the facility. The price will vary widely based on the specific model, size, and type of freezer. | 1        |
| 26. Insulation Panels (Walls)            | To ensure proper insulation of the facility, which is critical for maintaining low temperatures.   | 1        |
| 27. Pallet Racking                       | For organizing and storing products within the freezer.  | 4        |
| 28. Floor Sealer                         | A high-quality floor sealer to resist the cold temperature and moisture.   | 1        |
| 29. Refrigeration System                 | An industrial refrigeration system to keep the facility cold.  | 1        |
| 30. Industrial Dehumidifier              | To control moisture and prevent ice build-up inside the facility.  | 1        |
| 31. Lighting                             | Cold-resistant LED lighting suitable for cold storage facilities.  | 4        |
| 32. Pallet Jacks                         | Equipment for moving products around within the facility.  | 2        |
| 33. Insulated Doors                      | Special doors designed to withstand cold temperatures and maintain insulation.   | 1        |
| 34. Emergency Exit                       | Safety installation for emergencies, including proper signage and lighting.  | 1        |
| 35. Temperature Monitoring System        | A system for monitoring the temperature and ensuring it remains at the appropriate level.  | 1        |
| 36. Intelligent Energy Management System | A system for managing and optimizing energy usage in the facility.   | 1        |

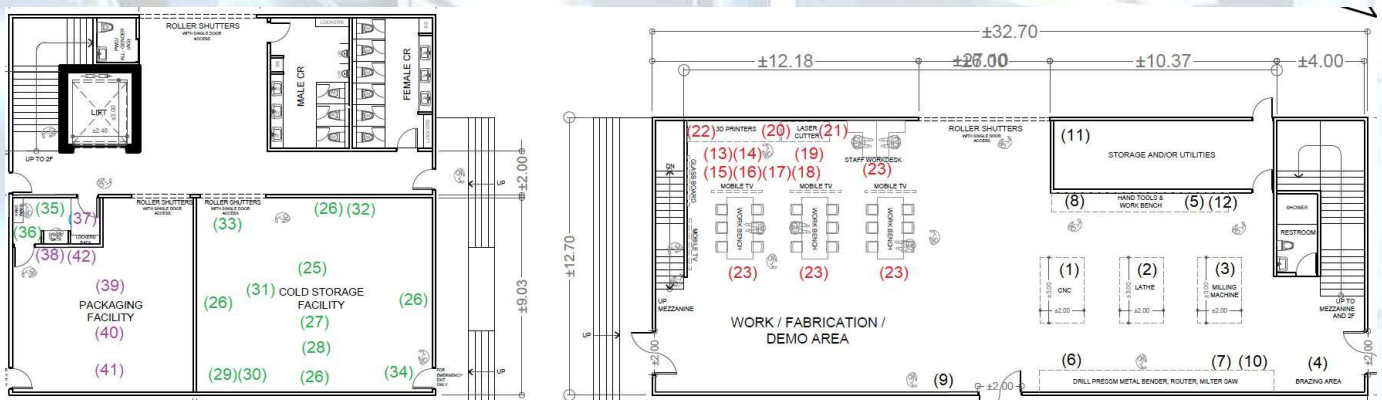

| Category                | Equipment Description                                      | Quantity |
|-------------------------|--|----------|
| 37. Measurement Tools   | Digital Kitchen Scales (Accurate measurements)             | 4        |
|                         | Thermometers (Infrared and Probe) (Temperature monitoring) | 4        |
|                         | pH Meters (Acidity monitoring)                             | 2        |
| 38. Safety Equipment    | Fire Extinguishers (Fire safety)                           | 2        |
|                         | First Aid Kits (Emergency treatment)                       | 1        |
| 39. Packaging Equipment | Vacuum Packaging Machine (Airtight food packaging)         | 1        |

|                          |   |   |
|--------------------------|---|---|
|                          | Heat Sealing Machine (Secure package sealing)               | 1 |
|                          | Label Printer (Package labeling)                            | 1 |
|                          | Zebra ZT230 Industrial Barcode Printer (Packaging printing) | 1 |
| 40. Storage and Handling | Stainless Steel Work Tables (Food preparation)              | 8 |
|                          | Shelving Units (Equipment and ingredient storage)           | 2 |
|                          | Ingredient Bins (Bulk ingredient storage)                   | 4 |
|                          | Carts (Moving heavy items)                                  | 2 |
|                          |   |   |
| 41. Cleaning             | Commercial Dishwasher (Utensil cleaning)                    | 1 |
|                          | Hand Washing Sink (Hygiene)                                 | 1 |
|                          | Three Compartment Sink (Utensil cleaning)                   | 1 |
| 42. Furniture            | Chairs (Seating)  | 4 |
|                          | Computer Desk (Administrative work)                         | 1 |
|                          | Computers (Recipe formulation, labeling, inventory, etc.)   | 2 |

#### Electrical Outlet Points

| Equipment Description    | Power Specification | Outlets Required |
|--------------------------|---------------------|------------------|
| Roller Conveyor          | 240V 1P             | 2                |
| Belt Conveyor            | 415V 3P             | 2                |
| Box Sealing Machine      | 240V 1P             | 2                |
| Strapping Machine        | 240V 1P             | 2                |
| Stretch Wrapping Machine | 240V 1P             | 2                |
| Heat Shrink Machine      | 240V 1P             | 2                |
| Weighing Scale           | 240V 1P             | 1                |
| Label Printer            | 240V 1P             | 1                |

#### Indicative Layout (Level 1)

#### 4. Equipment for Electronics, Robotics and IOT Workshop (Level 1 Mezzanine)

| Equipment Category   | Equipment Description                             | Quantity | Details  |
|----------------------|---|----------|--|
| 43. Microcontrollers | Arduino Uno                                       | 8        | Open-source electronic prototyping platform enabling users to create interactive electronic objects.   |
| 44. Microcontrollers | Raspberry Pi 4                                    | 8        | Compact computer board used for a variety of applications and projects.  |
| 45. Microcontrollers | ESP32   | 8        | A series of low-cost, low-power system on a chip microcontrollers with integrated Wi-Fi and dual-mode Bluetooth.   |
| 46. Microcontrollers | ESP8266   | 8        | A low-cost Wi-Fi chip with full TCP/IP stack and MCU capability.   |
| 47. Sensors          | Various Sensors                                   | 8 (sets) | <p>Sensor kits for a variety of IoT projects or equivalent:</p> <ul style="list-style-type: none"> <li>• DHT22 (Temperature &amp; Humidity Sensor)</li> <li>• PIR Motion Sensor</li> <li>• HC-SR04 (Ultrasonic Distance Sensor)</li> <li>• Photocell (Light Sensor)</li> <li>• MPU6050 (Gyroscope &amp; Accelerometer)</li> <li>• Reed Switch (Magnetic Sensor)</li> <li>• Soil Moisture Sensor</li> <li>• MQ-2 Gas Sensor</li> <li>• Load Cell &amp; HX711 Amplifier (Weight Sensor)</li> <li>• Sound Sensor (Microphone Module)</li> <li>• Infrared Obstacle Avoidance Sensor</li> <li>• LDR (Light Dependent Resistor)</li> <li>• Hall Effect Sensor (Magnetic Field)</li> <li>• Pulse Rate Sensor</li> </ul> |
| 48. Actuators        | Various Actuators (Servo Motors, DC Motors, LEDs) | 8 (sets) | <p>Actuator kits for robotics and IoT projects or equivalent:</p> <ul style="list-style-type: none"> <li>• Servo Motor (SG90)</li> <li>• DC Motors</li> <li>• Stepper Motor (28BYJ-48 with ULN2003 Driver)</li> <li>• Brushless DC Motor</li> <li>• Solenoid</li> <li>• Piezoelectric Actuator</li> <li>• Linear Actuator</li> <li>• Relay Module</li> <li>• LED Light Strip</li> <li>• Speaker/Buzzer</li> </ul>  |

|                        |   |          |   |
|------------------------|---|----------|---|
| 49. IoT Modules        | Various IoT Modules   | 8 (sets) | IoT module kits for various connectivity options or equivalent: <ul style="list-style-type: none"> <li>• <i>ESP8266 WiFi Module</i></li> <li>• <i>HC-05 Bluetooth Module</i></li> <li>• <i>SIM800L GSM Module</i></li> <li>• <i>NEO-6M GPS Module</i></li> <li>• <i>RAKWireless LoRa Module</i></li> <li>• <i>XBee Pro S2C</i></li> <li>• <i>RFID reader and tags</i></li> </ul>  |
| 50. Circuit Components | Basic Electronics Components Kit (Resistors, Capacitors, Diodes, Transistors, ICs, Breadboards, Jumper wires, Power supplies) | 8        | Basic electronics kits for building and testing circuits. <ul style="list-style-type: none"> <li>• <i>Resistors (Assorted)</i></li> <li>• <i>Capacitors (Assorted)</i></li> <li>• <i>Diodes</i></li> <li>• <i>Transistors (Assorted)</i></li> <li>• <i>Integrated Circuits (Assorted)</i></li> <li>• <i>Breadboards</i></li> <li>• <i>Jumper Wires (Assorted)</i></li> <li>• <i>DC Power Supply</i></li> <li>• <i>LED (Assorted)</i></li> <li>• <i>Switches (Assorted)</i></li> <li>• <i>Relays</i></li> <li>• <i>Stepper Motors</i></li> <li>• <i>Motor Driver ICs</i></li> <li>• <i>FPGA Development Boards</i></li> <li>• <i>Function Generator</i></li> </ul> |
| 51. Displays           | Various Displays  | 8 (sets) | Variety of display types for different project needs. <ul style="list-style-type: none"> <li>• <i>7" TFT LCD Display</i></li> <li>• <i>OLED Display Module</i></li> <li>• <i>32x8 LED Matrix Panel</i></li> </ul>   |
| 52. Computers          | Laptop Computers  | 6        | Following specification or aboe: <ul style="list-style-type: none"> <li>• <i>i5 or Ryzen 5</i></li> <li>• <i>16 GB RAM</i></li> <li>• <i>500GB SSD</i></li> <li>• <i>FHD screen</i></li> <li>• <i>USB and HDMI ports</i></li> <li>• <i>Battery life of more than 5 hours</i></li> </ul>   |
| 53. Robotic Arms       | ABB's GoFa or UFactory 850 collaborative robot  | 2        | High-speed, high-precision collaborative industrial robotic arm.  |
| 54. Soldering Tools    | Soldering Tools Set   | 8        | Essential tools for assembling electronic components. <ul style="list-style-type: none"> <li>• <i>High-Precision Soldering Station</i></li> <li>• <i>Lead-Free Solder Wire</i></li> <li>• <i>Desoldering Pump</i></li> </ul>  |

|                       |   |   |  |
|-----------------------|---|---|--|
|                       |   |   | <ul style="list-style-type: none"> <li>• <i>Soldering Tips (Variety pack)</i></li> <li>• <i>Solder Wick</i></li> <li>• <i>Flux Pen</i></li> <li>• <i>Tip Tinner</i></li> <li>• <i>Helping Hands with Magnifying Glass</i></li> <li>• <i>Safety Glasses</i></li> <li>• <i>Soldering Mat</i></li> </ul>  |
| 55. Measurement Tools | Multimeter  | 8 | Instrument for testing electrical connections and activity.  |
|                       | Oscilloscope  | 2 | Instrument for observing varying signal voltages.  |
| 56. Hand Tools        | Hand Tools Set (Screwdrivers , Pliers, Wire Cutters, Precision knife) | 8 | Essential tools for manual work on projects. <ul style="list-style-type: none"> <li>• <i>Set of pliers</i></li> <li>• <i>Set of screw drivers</i></li> <li>• <i>Set of wire markers</i></li> <li>• <i>Wire strippers</i></li> <li>• <i>Digital multi-meter</i></li> <li>• <i>Wire crimpers</i></li> <li>• <i>Clamp ammeter</i></li> <li>• <i>Mobile tool trolley</i></li> <li>• <i>Plastic cable tray 1 m × 1.5" × 1.5"</i></li> </ul>                             |
| 57. Other Tools       | Other Tools Set   | 8 | Additional tools for constructing and securing electronic projects. <ul style="list-style-type: none"> <li>• <i>Heat shrink tubing</i></li> <li>• <i>Adhesive tapes</i></li> <li>• <i>Heat gun</i></li> <li>• <i>PCBs</i></li> <li>• <i>PCB Etching solution</i></li> <li>• <i>Heat shrink tubing (assorted sizes)</i></li> <li>• <i>PCBs and PCB Etching solution</i></li> <li>• <i>Precision Knife Set</i></li> </ul>  |
| 58. 3D Printing Tools | 3D Printer  | 2 | For fabricating custom parts and components.   |
| 59. (Safety Equipment | Safety Equipment Set  | 8 | Safety equipment to ensure user safety during hands-on work. <ul style="list-style-type: none"> <li>• <i>Safety Glasses</i></li> <li>• <i>Fume Extractor for Soldering</i></li> <li>• <i>Antistatic Mat</i></li> <li>• <i>Antistatic Wrist Strap</i></li> <li>• <i>Ear Plugs</i></li> <li>• <i>First Aid Kit</i></li> <li>• <i>Fire Extinguisher (special for electrical fires)</i></li> <li>• <i>Safety Gloves (for handling hot or sharp objects)</i></li> </ul> |

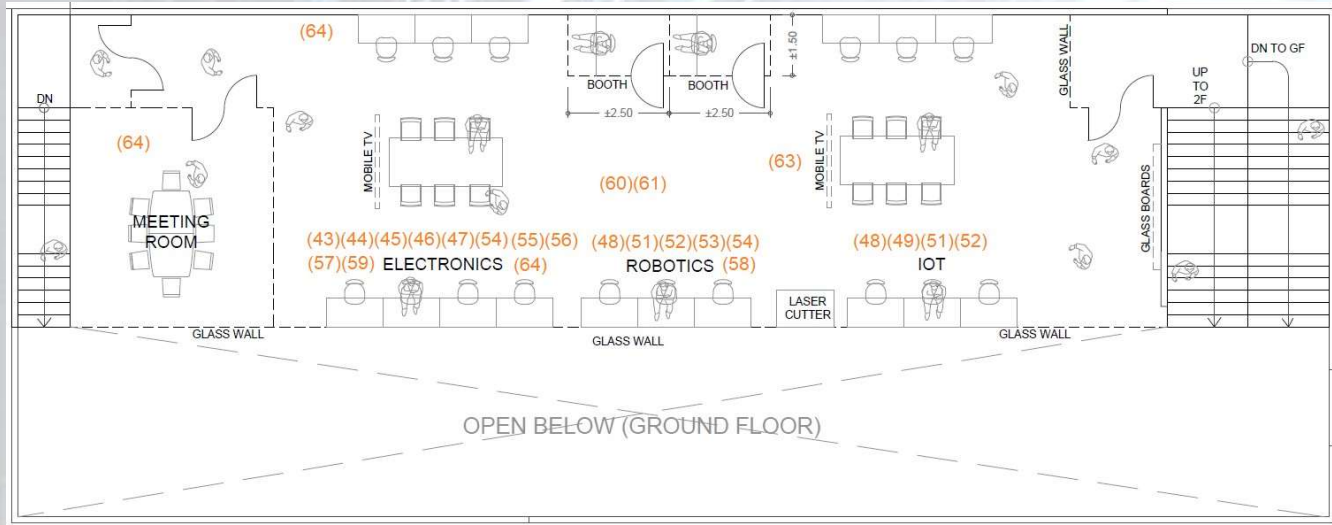

|  |  |  |   |
|--|--|--|---|
|  |  |  | <ul style="list-style-type: none"> <li>• Ear Protection (if using noisy tools)</li> <li>• Emergency Exit Signage</li> <li>• </li> </ul> |
|--|--|--|---|

## Furniture

| Category                    | Furniture                        | Quantity | Description   |
|-----------------------------|----------------------------------|----------|---|
| 60. Workstations            | Workbenches/ Tables              | 10       | Sturdy workbenches for hands-on work.                 |
|                             | Comfortable Chairs               | 8        | Comfortable chairs for extended work periods.         |
|                             | Computer Desks                   | 6        | Desks for computers and electronics work.             |
|                             | Computers for Design/Coding      | 6        | Computers for design and coding tasks.                |
| 61. Storage                 | Storage Cabinets for Tools       | 2        | Cabinets for storing tools and equipment.             |
|                             | Storage Cabinets for Components  | 2        | Cabinets for storing electronic components.           |
|                             | Shelves for Projects/Robots      | 2        | Shelves for displaying projects and robots.           |
|                             | Rolling Tool Chests              | 2        | Mobile tool chests for flexible workspace.            |
|                             | Filing Cabinet for Documentation | 1        | Cabinet for storing documentation and records.        |
| 62. Safety & Cleanup        | Soldering/Hot Work Station       | 1        | Dedicated station for soldering and hot work.         |
|                             | Safety Equipment Storage         | 1        | Storage for safety equipment like goggles and gloves. |
|                             | Trash/Recycling Bins             | 2        | Bins for waste management.                            |
|                             | First Aid Kit                    | 1        | First aid kit for minor injuries.                     |
|                             | Fire Extinguisher                | 1        | Fire extinguisher for safety.                         |
| 63. Teaching & Presentation | Large Whiteboards                | 4        | Whiteboards for teaching and brainstorming.           |
|                             | Large Screen TVs                 | 2        | TV for presentations and media display.               |
| 64. Meeting Room            | Conference Table                 | 1        | Large conference room table                           |
|                             | Large Screen TV                  | 1        | TV for presentations and media display                |
|                             | Conference Room Chairs           | 12       | Comfortable chairs for the conference table           |

## Indicative Layout (Level 1 Mezzanine)

## Electrical Outlet Points (240V – Single Phase)

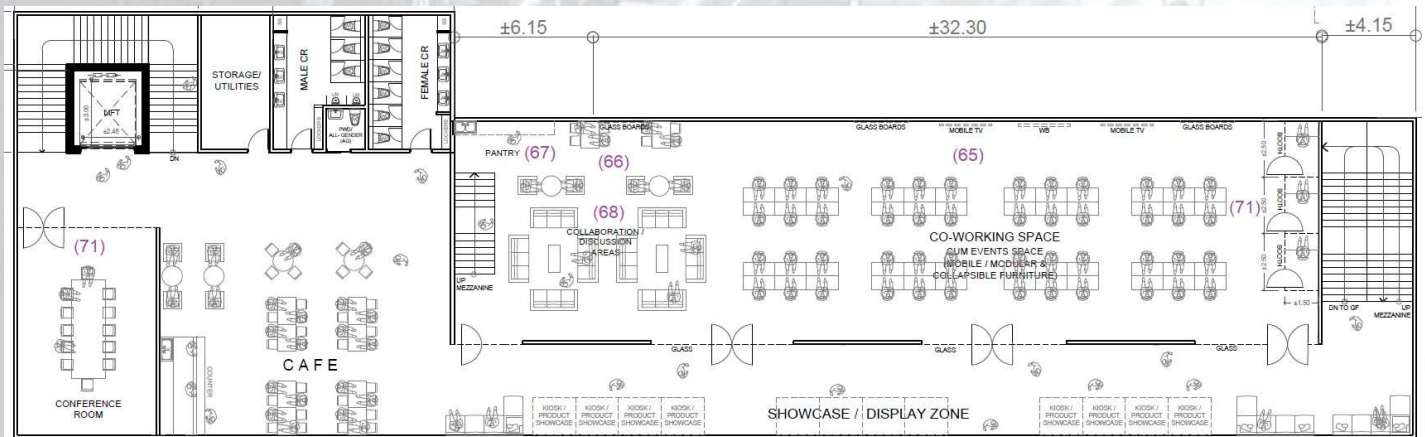

| Electrical Outlet to Support Equipment/Furniture | Quantity | Electrical Points per Unit | Total Electrical Points |
|--|----------|----------------------------|-------------------------|
| Desks (Workbenches/Tables + Computer Desks)      | 16       | 4                          | 64                      |
| 3D Printers                                      | 2        | 2                          | 4                       |
| Computers for Design/Coding                      | 6        | 2                          | 12                      |
| Large Screen TVs                                 | 3        | 2                          | 6                       |
| Meeting Room Conference Table                    | 6        | 2                          | 12                      |
| <b>Total Electrical Outlets</b>                  |          |                            | <b>98</b>               |

## 5. Incubation, Co-Working and Event Space (Level 2 & 2M)

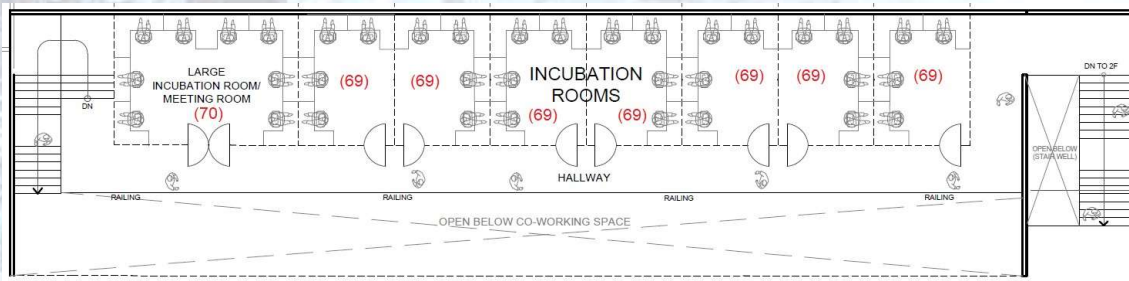

| Category                        | Item                       | Quantity  |
|---------------------------------|----------------------------|-----------|
| 65. Co-working Space            | Office chairs on rollers   | 48        |
|                                 | Foldable tables on rollers | 48        |
| 66. Dining Area                 | Dining tables              | 2         |
|                                 | Dining chairs              | 8         |
| 67. Pantry                      | Refrigerator               | 1         |
|                                 | Microwave Oven             | 1         |
|                                 | Electric Kettle            | 1         |
|                                 | Coffee Maker               | 1         |
|                                 | Water Dispenser            | 1         |
|                                 | Dish Rack                  | 1         |
|                                 | Storage Cabinets           | As needed |
|                                 | Cutlery & Crockery         | As needed |
| 68. Sofa Area                   | 3-Seater Sofas             | 8         |
|                                 | Coffee tables              | 2         |
| 69. Small Incubation Rooms (6x) | Mobile tables on rollers   | 6         |

## SECTION 6 -ANNEX G

# Initial Environmental Examination (2021)

---

## Philippines: Supporting Innovation in the Philippine Technical and Vocational Education and Training System Project

Prepared by Technical Education and Skills Development Authority, Government of the Philippines for the Asian Development Bank.

This initial environmental examination is a document of the borrower. The views expressed herein do not necessarily represent those of ADB's Board of Directors, Management, or staff, and may be preliminary in nature. Your attention is directed to the "terms of use" section on ADB's website.

In preparing any country program or strategy, financing any project, or by making any designation of or reference to a particular territory or geographic area in this document, the Asian Development Bank does not intend to make any judgments as to the legal or other status of any territory or area.

## **EXECUTIVE SUMMARY**

### **Introduction**

The Philippine Government has requested a loan from Asian Development Bank (ADB) in the amount of \$ 100 million to finance the proposed Supporting Innovation in the Philippine Technical and Vocational Education and Training Project (the Project) which will support the Philippine Development Plan (2017–2022) to improve the quality of technical and vocational education and training (TVET) training programs, integrate 21st century competencies, strengthen certification, encourage research and innovation, and forge stronger links between TVET institutes and industry to increase employability of Filipino youth. The Project aims to strengthen the global competitiveness and readiness of Filipino mid-level workforce and to effectively use TVET as an instrument for social equity for workforce inclusion and poverty reduction. The Executing Agency is the Technical Education and Skills Development Authority (TESDA).

### **Project Rationale**

This Initial Environmental Examination (IEE) was prepared in relation to the upgrading and modernization of 17 TESDA technology institutions (TTIs), one per region, into industry-responsive innovation centers. To support the implementation of innovations within TESDA, Regional TVET Innovation Centers (RTICs) will be established in 16 regions and TTI facilities will be rehabilitated in 17 regions. Except for RTIC-Cebu, which has its own innovation center already, new RTICs will also be established within 16 TTIs. Each innovation center will have different areas of specialization supportive to the region's economic drivers.

Each innovation center will provide the infrastructure to operationalize the strategy for social innovation and the processing of “shared context” for quality assurance, upskilling of workforce, entrepreneurship, applied research and development, problem-solving to create social value, collaborative arrangements and institutional partnerships (international and domestic). It will serve as information hub and connector between the local industry and the government agencies (national and local), firms (domestic and international), training institutions, colleges, universities and research institutions.

Aside from the physical facility, the TTIs with RTICs will also be capacitated to include in their current curricular offering higher-level TVET programs (Philippine Qualifications Framework levels III to V) and joint skills development programs with industry, focusing on 21st century skills and new, advanced and emerging technologies. Complementary to the skills development programs of the TTIs, the RTICs will offer research, innovation, entrepreneurship and startup training programs. Likewise, the RTICs will be capacitated to implement “spoke and hub model” and provide technology demonstration services, research and development services, and incubation and business start-up services to its learners, industry partners and public and private technical vocational Institutions (TVIs) within the region.

The Project will support 4 outputs:

- Output 1: The Philippines's skills development ecosystem modernized
- Output 2: TVET training made more demand-driven and industry-led
- Output 3: Selected TESDA TTIs upgraded and modernized into industry-responsive innovation centers
- Output 4: TESDA's management capacity and resilience strengthened.

## **Purpose and Methodology of Environmental Assessment**

This environmental assessment focuses on the upgrading and modernization of TTIs into industry-responsive innovation centers. These TTIs will have improved training facilities and equipment that will benefit students. Climate-smart designs and climate-proofing measures will be adopted while upgrading the TTIs and establishing select RTICs.

## **Environment Classification and Assessments**

The Project is classified as environment category B based on ADB's Rapid Environment Assessment (REA) Checklist and Safeguards Policy Statement (SPS) 2009, requiring the preparation of an IEE and Environmental Management Plan (EMP). The IEE and EMP covers the civil works proposed under Output 3 of the Project, which covers the rehabilitation of existing TTIs and construction of new RTICs. The proposed civil works will be undertaken entirely within the existing campuses of TESDA, which are all owned by TESDA and / or the government of the Philippines. The proposed sites are located within built-up areas. There are no protected areas, wetlands, mangroves, estuaries, cultural heritage site or historical monuments that will be directly affected by the Project.

For new project where the total construction area is less than 1 hectare, it is not covered by the Philippine Environmental Impact Statement System (PEISS), based on the Department of Environment and Natural Resources–Environmental Management Bureau's (DENR-EMB) Memorandum Circular (MC) 005, series of 2014. The expansion, modification and/or rehabilitation of existing buildings with issued environmental compliance certificate (ECC), on the other hand, requires amending the ECC through the submission of an Environmental Performance Report and Management Plan to the DENR–EMB regional office where the project is located. A Building Permit must be secured from the local government unit where the facility will be constructed, in compliance with Presidential Decree No. 1096 (National Building Code of the Philippines) before any type of building construction or repair work can start. No significant non-compliance of existing facilities with government environment requirements has been observed during various consultations with TTIs, and basic environmental and utility services (water supply, wastewater treatment, and drainage) will be improved as part of upgrading of TTI facilities. The project will ensure that all the requisite clearances and permits will be secured prior to construction.

The detailed design of the TTIs and RTICs will conform with the National Building Code of the Philippines and international standards. Applicable local government clearances such as building, sanitary and electrical permits will be secured prior to construction. Other permits to be secured include Fire Safety Evaluation Clearance, Height Clearance Permit (for sites near airports) and Tree Cutting Permit. This IEE will be updated to include the detailed design of the Project.

## **Environmental Conditions at Project Sites**

All of the identified TTIs have sufficient land for the proposed rehabilitation of existing buildings and construction of new buildings. All of the identified TTIs are connected with existing national, provincial, or local roads and can be accessed through public transportation. All TTIs have available land for the proposed innovation centers. The proof of occupancy includes Usufruct, Presidential Proclamation and Republic Act, Deed of Donations, Tax Declaration and Land Title.

In terms of topography, only the Regional Training Center - Baguio is located upland, with an elevation of 1,338 meters above sea level (masl), while the other 16 TTIs are located lowland, with an elevation that ranges from 3 to 43 masl.

The provinces that are at most risk to earthquakes include Benguet, Pangasinan, Davao Oriental, Leyte, Agusan del Norte and South Cotabato. Pangasinan is prone to earthquake, specifically the deep-focused ones, because of the Manila Trench, while Davao Oriental, Leyte, Agusan del Norte and General Santos have earthquake hazards due to the Philippine Fault Zone. Frequency of shallow and left-lateral strike-slip earthquakes in Eastern Pangasinan and Benguet can be attributed to its location along the Philippine Fault Zone. Benguet, Oriental Mindoro, Davao Oriental, South Cotabato and Misamis Oriental are susceptible to landslide hazards.

In terms of tsunami hazard, the TTIs that are most at risk from tsunami include Pangasinan Technological Institute, Regional Training Center Cavite, Laguna, Rizal, Quezon (RTC CALABARZON), Provincial Training Center Oriental (PTC) Mindoro – San Teodoro, RTC Iloilo, RTC Cebu, and RTC Zamboanga Peninsula (high potential); RTC Tacloban, RTC Tagoloan, and Davao Oriental Polytechnic Institute (local generators); and General Santos National School of Arts and Trades (local and foreign generators).

Active volcanoes that are within 100 km from proposed TTIs include Mt. Pinatubo, which is 65.13km from RTC Central Luzon- Guiguinto; Taal Volcano, which is 55.34 km and 29.06 km from RTC NCR and RTC CALABARZON, respectively; Mt. Isarog and Mt. Iriga, which is 13.86 km and 24.87 km, respectively, from RTC Pili; Davao Oriental Polytechnic Institute, which is 52 km from Leonard Range Volcano (or Leonard Kniazeff); and Mt. Parker, which is 30.72 km from General Santos National School of Arts and Trade.

In terms of frequency of tropical cyclones (TCs), Region II was the most affected, with 81-106 TCs from 1953-2010, while Regions I, CAR, V and VII received about 61-80 TCs for the same period. Regions XI, XII and BARMM received the lowest number, with 1-2 TCs for the same period.

TTIs most at risk for flooding include Pangasinan Technological Institute, RTC Tuguegarao, RTC - NCR, RTC – Pili, RTC Zamboanga Peninsula, RTC Tagoloan, and Davao Oriental Polytechnic Institute, where flooding may reach up to 1.5 meters during a 5-year return period. RTC Central Luzon – Guiguinto is also at risk for a 1.5 m flood with a return period of 25 years. TTIs with medium to high (>0.5 m to >1.5 m) 100-year return period flood hazard, include RTC – Baguio and Regional Manpower Development Center, while TTIs with low probability or no flooding, even a 100-year return period, include RTC – CALABARZON, PTC Oriental Mindoro – San Teodoro, RTC – Iloilo, RTC – Cebu, RTC – Tacloban, General Santos National School of Arts and Trades, and Northern Mindanao School of Fisheries.

Areas highly at risk to El Niño – induced drought include Davao Oriental, South Cotabato, Sultan Kudarat, Misamis Oriental and Cebu. Provinces included in the Project that are most at risk to projected rainfall changes are Batangas, Pangasinan, Metro Manila, Bulacan, Camarines Sur, Cebu, Leyte, Misamis Oriental and Sultan Kudarat.

In terms of locations of protected areas and key biodiversity areas, RTC Baguio and Regional Manpower Development Center are 1 km within buffer zone of Lower Agno Watershed Forest Reserve and Marcos Highway Watershed Forest Reserve; and Liguasan Marsh, respectively. General Santos National School of Arts and Trades is 5 km within buffer zone of Sarangani Bay Protected Landscape; PTC Oriental Mindoro– San Teodoro, also 5 km within buffer zone of Puerto Galera; and RTC Zamboanga Peninsula, also 5 km within buffer zone from Pasonanca watershed.

RTC Tuguegarao, RTC Pili, RTC Cebu and RTC Tacloban, are all 10 km within buffer zone of nearest protected areas.

### **Environmental Impacts and Mitigation Measures**

A comprehensive environment and social safeguards questionnaire was prepared and used during the site surveys of TTIs. Assessments were done through video conferencing with TESDA regional safeguards focals to verify the initial assessments identified in the environment and social safeguards questionnaires sent to regional offices in November 2020. The National Institute for Technical Education and Skills Development (NITESD)-TESDA central office assisted in completing the questionnaires and provided lacking information.

The project is expected to have positive impact on the quality of (TVET in the Philippines. Students who intend to pursue TVET will directly benefit from upgraded curriculum geared towards the fourth industrial revolution (4IR), and better facilities in innovation centers.

During the pre-construction phase, major risks and potential negative impacts include geological and natural hazards, flooding risks and climate change impacts; and minor impacts on vegetation (loss of trees).

During construction, major potential impacts include disturbance of land and soil condition and generation of wastes from rehabilitated TTIs and construction of innovation centers, and impact on air quality and noise level; and medium impacts on the following: surface water quality, loss of vegetation, reduced water supply from ground water, temporary disturbance of access, increased level of use of water, increased level of vehicle traffic, and health and safety of workers and the community. There is a risk that asbestos or asbestos containing materials could be present in some of buildings to be demolished or rehabilitated. The Project will refer to DENR Administrative Order (DAO) No. 2000 – 02 (Chemical Control Order for Asbestos), particularly Section IX, Specific Requirements and Standards, item 6 – Renovation, Removal and Demolition Requirements. Based on the DAO, the duly authorized owner or operator, in this case the TTI, through the Design and Construction Supervision Consulting (DSC) Firm, shall thoroughly inspect and assess the facility to verify the presence of any friable asbestos containing materials, or non-friable asbestos containing materials that have become friable prior to the commencement of any demolition and/or rehabilitation activity. In addition, and based on the findings of the risk assessment, the DSC Firm will also develop a risk management plan to be refined and implemented by works contractors during the construction phase, using qualified and experienced experts.

During operation, major risks and impacts include climate change risks, while medium for generation of solid wastes from TVET activities, potential deterioration of water quality, additional strain to existing water resource, traffic generation, increase in level of particulate matter, and risks of students and workers from handling equipment.

Based on the assessment of adverse impacts of the Project, mitigating measures were proposed to address these potential impacts.

### **Information Disclosure, Consultation and Participation**

Public consultations were conducted with different stakeholders via Microsoft Teams and Zoom videoconferencing due to travel restrictions brought by the COVID-19 pandemic. Concerns and recommendations of the stakeholders were incorporated in the environmental management plan

(EMP). A grievance redress mechanism (GRM) was also established at the national and regional levels to address concerns and complaints arising from the Project construction.

In line with ADB's Access to Information Policy (2018), the IEE Report for the project will be made available in a timely manner, in an accessible place, and in a form and language that will be understood by affected people and other stakeholders. The purpose is for affected people, including the general public, to provide meaningful inputs during project implementation. As this version of the IEE is based on the conceptual design, updated IEE reflecting detailed engineering design, which incorporates further inputs and feedbacks of all concerned stakeholders, will also be made available to the public.

### **Grievance Redress Mechanism**

The Project Management Unit (PMU) will establish and maintain a grievance redress mechanism to register, assess, and address project-related complaints. The TTIs will assign GRM focals prior to commencement of works to address the issues raised by affected people on the project. Contact number of the contactor, the TTI safeguards focals, the PMU and the design and construction supervision consultant (DSC) including names, positions, and telephone numbers shall be disclosed at the project site. Persons or groups with project related issues may file their complaints with the GRM focals through the grievance intake form or through email or complaints box that will be made available in each TTI. The TESDA GRM focal at the regional office will be responsible for the registration of grievances and communication with aggrieved party.

### **Environmental Management Plan**

The EMP for the project includes the proposed mitigation measures, environmental monitoring and reporting requirements, related institutional or organizational arrangements, capacity development and training measures, implementation schedule, cost estimates and performance indicators. The Contractor must adhere to the mitigating measures and other requirements in the EMP to ensure that construction will not adversely affect the environment, the community and workers. In addition, the Contractor will prepare the following detailed Contractor's EMP (CEMP): workers' accommodation plan, occupational health and safety plan, emergency response plan, traffic management plan, waste disposal management plan, and demobilization plan. The contractor will also implement an asbestos risk management plan, as applicable.

## **I. INTRODUCTION**

### **A. Project Concept and Rationale**

1. The proposed Supporting Innovation in the Philippine Technical and Vocational Education and Training System Project (the Project) aims to strengthen the institutional capacity of Technical Education and Skills Development Authority (TESDA) as a public institution with the mandate to develop strategies and regulate the technical and vocational education and training (TVET) ecosystem, as well as become key actor in enabling policy and social innovations towards inclusive sustainable development.

2. The Philippine Development Plan, 2017–2022 emphasizes the need to improve the quality of TVET training programs, integrate 21st century competencies, strengthen certification, improve research and innovation, and forge stronger links between TVET institutes and industry to increase employability of Filipino workforce, including women and the youth.

3. The National Technical Education and Skills Development Plan 2018–2022 (NTESDP) identified priority industries and employment generators of TVET subsector, namely: (i) tourism; (ii) construction; (iii) information and communication technology and business process management; (iv) transport, communication and storage; (v) agriculture, fisheries, and forestry (including agro-processing); (vi) manufacturing including food manufacturing and electronics; and (vii) health, wellness, and other social services. The NTESDP 2018–2022 highlights the need to address social inequity through “greater collaboration between TESDA and other agencies that serve the basic sectors including agriculture, agrarian reform, environment and natural resources and social welfare and development. Moreover, recent social development policies likewise affirm the role of TVET and TESDA in human capital development, and convergence with other social programs such as universal access to health care, education, and social protection.

### **B. Methodology for Environmental Assessment**

4. The project has been screened and categorized as “B” for environment since the proposed impacts of civil works are site-specific and confined within TESDA campuses, most are reversible, and can be managed using mitigation hierarchy and implementation of environmental management plan. This Initial Environmental Examination (IEE) and Environmental Management Plan (EMP) have been prepared based on ADB’s Safeguard Policy Statement (SPS, 2009).

5. The preparation of this IEE and EMP was guided by the following: ADB SPS (2009), ADB Operational Manual Section OM/F1, Access to Information Policy (2018), World Bank Group Environment, Health and Safety (EHS) Guidelines, the Philippine Environmental Impact Statement System (PEISS) and relevant Philippine environmental laws and regulations.

6. This IEE presents the findings from the assessment of 17 TESDA regional training centers and schools that represent each region in the Philippines. The assessments were done in two parts: the first, conducted in the 4th quarter of 2020, used environmental and social safeguards questionnaires to get information about TESDA facilities and the baseline environmental and social conditions in each site. The second, which was done in February 2021, involved consultations online with designated safeguards focal for each region, together with staff from the NITESD-TESDA. These consultations consisted of capacity building of safeguards focals on ADB’s SPS, particularly Safeguards Requirements 1: Environment; discussion on proposed Innovation Center site or alternative sites; discussion and clarification on the environmental and social safeguards questionnaires; and discussion on safeguards focals’ responsibilities during

project implementation, creation of Grievance Redress Committee for each TESDA site, and safeguards focals' role in monitoring and submission of reports to TESDA Central Office and ADB.

7. Following the survey and consultations, secondary data were gathered from different sources such as TESDA technology institutions (TTIs) proximity to protected areas or areas with high biodiversity, climate change and geological hazards, and socio-economic conditions in the area, where TESDA facilities will be constructed or rehabilitated. For each phase of the project, activities were identified as well as the environmental implications of each activity. Mitigation measures were proposed to address adverse environmental impacts. Responsibilities and budget for mitigation measures, frequency and parameters for environmental monitoring and reporting, institutional arrangements, and capacity building activities, were likewise indicated in the proposed Environmental Management Plan.

## II. POLICY, LEGAL AND ADMINISTRATIVE FRAMEWORK

### A. ADB's Environment Safeguard Policy

8. The environment safeguards requirements of ADB are presented in the following guidelines:

- (i) Safeguard Policy Statement (SPS) (2009),
- (ii) Operational Manual Section F1/BP<sup>2</sup>, and
- (iii) Access to Information Policy (2018)

9. ADB's Strategy 2030<sup>3</sup> emphasizes the pursuit of environmentally sustainable and inclusive economic growth for developing member countries (DMCs) and requires mitigation to address environmental and social impacts of projects. The ADB's Safeguards Policy Statement (SPS, 2009) governs the environmental and social safeguards of ADB's operations. When a project has been identified for ADB financing, it is screened and categorized to determine the following:

- (i) Significance of potential impacts or risks of the project to the environment
- (ii) Level of assessment and institutional resources required to address the safeguard issues; and
- (iii) Information disclosure and consultation requirements.

10. The Environmental Safeguard Requirements 1 (SR1) of the SPS (2009) outlines the requirements that borrowers/clients have to meet. These requirements include assessing impacts, planning and managing impact mitigations, preparing environmental assessment reports, disclosing information and undertaking stakeholder consultations, establishing a grievance redress mechanism, and monitoring and reporting. It also includes specific environmental safeguard requirements pertaining to biodiversity conservation and sustainable management of natural resources, pollution prevention and abatement, occupational and community health and safety, and conservation of physical cultural resources.

11. For environmental safeguards, projects are classified into the following categories:

- i) **Category A.** The proposed project is likely to have significant adverse environmental impacts that are irreversible, diverse, or unprecedented; impacts may affect an area larger than the sites or facilities subject to physical works. A full-scale environmental impact assessment (EIA) including an EMP, is required.

- ii) **Category B.** The proposed project's potential environmental impacts are less adverse and fewer in number than those of category A projects; impacts are site-specific, few if any of them are irreversible, and impacts can be readily addressed through mitigation measures. An IEE, including an EMP, is required.
- iii) **Category C.** The proposed project is likely to have minimal or no adverse environmental impacts. No EIA or IEE is required although environmental implications need to be reviewed.
- iv) **Category FI.** The proposed project involves the investment of ADB funds to, or through, a financial intermediary.

12. Project categorization has been done using REA checklist following the guidance provided above and the project is categorized as B. As per SPS 2009, **Category B** projects warrants preparation of an IEE.

13. The SPS (2009) includes 11 policy principles on environment safeguards on screening, conduct of environmental assessment, alternative analysis, mitigation hierarchy, need for meaningful consultation, public disclosure, environmental management planning, biodiversity protection and conservation, pollution prevention, occupational health and safety, and conservation of physical cultural resources. The requirements of the 11 policy principles are detailed in Table 1.

**Table 1: Environmental Safeguard Policy Principles of ADB Safeguard Policy Statement (2009)**

| Environment Policy Principle                     | Requirement   |
|--|---|
| 1. Screening and categorization                  | Use of a screening process for each proposed project to determine the extent and type of environmental assessment commensurate with the significance or potential impacts and risks.  |
| 2. Environmental assessment                      | Conduct of an environmental assessment for each proposed project to identify potential impacts and risks to environment and people.   |
| 3. Examination of alternatives                   | Examine alternatives to project's location, design, technology, and components and their potential environmental and social impacts. Also consider the "no project" alternative.  |
| 4. Environmental mitigation and monitoring plans | Prepare an EMP that includes the proposed mitigation measures, environmental monitoring and reporting requirements, related institutional or organizational arrangements, capacity development and training measures, implementation schedule, cost estimates, and performance indicators.  |
| 5. Consultation and grievance redress mechanism  | Carry out meaningful consultation with affected people and facilitate their informed participation early in the project preparation process and ensure that their views and concerns are taken into account.<br><br>Establish a grievance redress mechanism to receive and facilitate resolution of the affected people's concerns regarding the project's environmental performance.   |
| 6. Public disclosure                             | Disclose the environmental assessment including the EMP in a form and language understandable to affected people and other stakeholders.  |
| 7. EMP implementation and monitoring             | Implement the EMP and monitor its effectiveness. Document the monitoring results, including corrective actions and disclose the monitoring reports.   |
| 8. Protection of critical habitats               | Do not implement project activities in areas of critical habitats unless (i) there are no measurable adverse impacts on the critical habitat, (ii) there is no reduction in the population of any recognized endangered or critically endangered species and (iii) any lesser impacts are mitigated. If a project is located within a legally protected area, additional programs to promote and enhance the conservation aims of the protected area will be implemented. |

| Environment Policy Principle                     | Requirement  |
|--|--|
| 9. Pollution prevention and control technologies | Apply pollution prevention and control technologies and practices consistent with international good practices as reflected in internationally recognized standards such as the World Bank's Environmental, Health, and Safety (EHS) Guidelines. |
| 10. Occupational health and safety               | Provide workers with safe and healthy working conditions and prevent accidents, injuries and diseases in the workplace. Minimize adverse impacts and risks to the health and safety of local communities.  |
| 11. Preservation of physical cultural resources  | Conserve physical cultural resources and provide a "chance find" procedure and conservation approach for materials that may be discovered during project implementation.   |

EHS = Environmental, Health, and Safety, EMP = environmental management plan.

14. Aside from ADB SPS (2009), the ADB also prescribes the Access to Information Policy (2018) which requires consultations, participation and disclosure of information to enhance stakeholders' trust in and ability to engage with ADB. The policy promotes transparency, accountability, and participatory development. It establishes the disclosure requirements for documents produced or to be produced through ADB assistance. The IEE, EMP and the environmental monitoring reports of the project are to be disclosed at the ADB website in accordance with the Access to Information Policy (2018).

15. For a category B project, the draft IEE report should be available to interested stakeholders before project approval and posted on the ADB's website upon Board approval of the project.

## **B. Philippines' Legal Framework and Regulatory Requirements**

16. Presidential Decree (PD) 1151, enacted on June 6, 1977, established the Philippine Environment Policy to address the need to formulate an integrated program to protect the environment. The policy mandates the government, in cooperation of concerned private organizations and entities to use all practicable means to promote the general welfare of the people through safe, decent, helpful, productive and aesthetic environment. All agencies and instrumentalities of the national government, including all government owned and controlled corporations, as well as private companies and entities with projects or undertakings that can significantly affect the quality of the environment, are required to prepare a detailed statement on the environmental impact of the proposed action, project or undertaking.

17. Presidential Decree 1586, which became effective on June 11, 1978, established the Philippine Environmental Impact Statement System. Section 4 of the decree empowers the President or his duly authorized representative to grant or deny the issuance of environmental compliance certificates (ECCs) for environmentally critical projects (ECPs) and projects within environmentally critical areas (ECAs).

18. Presidential Proclamation No. 2146 (Proclaiming Certain Areas and Types of Projects as Environmentally Critical and Within the Scope of the Environmental Impact Statement System Established under Presidential Decree No. 1586), proclaim certain areas and types of projects as environmentally critical, and hence within the scope of the PEISS system.

19. ECPs include the following:
- (i) Heavy industries
    - a. Non-ferrous metal industries
    - b. Iron and steel mills
    - c. Petroleum and petrochemical industries including oil and gas
    - d. Smelting plants

- (ii) Resource extractive industries
    - a. Major mining and quarrying projects
    - b. Forestry projects
      - 1. Logging
      - 2. Major wood processing projects
      - 3. Introduction of fauna (exotic animals) in public / private forests
      - 4. Forest occupancy
      - 5. Extraction of mangrove products
      - 6. Grazing
    - c. Fishery Projects
      - 1. Dikes for/and fishpond development projects
  - (iii) Infrastructure Projects
    - a. Major dams
    - b. Major power plants (fossil-fueled, nuclear fueled, hydroelectric or geothermal)
    - c. Major reclamation projects
    - d. Major roads and bridges
20. ECAs include the following:
- (i) All areas declared by law as national parks, watershed reserves, wildlife preserves and sanctuaries;
  - (ii) Areas set aside as aesthetic potential tourist spots;
  - (iii) Areas which constitute the habitat for any endangered or threatened species of indigenous Philippine wildlife (flora and fauna);
  - (iv) Areas of unique historic, archaeological, or scientific interests;
  - (v) Areas which are traditionally occupied by cultural communities or tribes;
  - (vi) Areas frequently visited and/or hard-hit by natural calamities geologic hazards, floods, typhoons, volcanic activity, etc.
  - (vii) Areas with critical slopes;
  - (viii) Areas classified as prime agricultural lands;
  - (ix) Recharged areas of aquifers;
  - (x) Water bodies characterized by one or any combination of the following conditions:
    - a. tapped for domestic purposes;
    - b. within the controlled and/or protected areas declared by appropriate authorities;
    - c. which support wildlife and fishery activities.
  - (xi) Mangrove areas characterized by one or any combination or the following conditions:
    - a. with primary pristine and dense young growth;
    - b. near or adjacent to traditional productive fry or fishing grounds;
    - c. which act as natural buffers against shore erosion, strong winds and storm floods;
    - d. on which people are dependent for their livelihood.
  - (xii) Coral reef characterized by one or any combination of the following conditions:
    - a. with 50% and above live coralline cover;
    - b. Spawning and nursery grounds for fish;
    - c. Which act as natural breakwater of coastlines.

21. Administrative Order No. 300 (Further Strengthening the Philippine Environmental Impact Statement System and Clarifying the Authority to Grant or Deny the Issuance of ECC), signed in 1996, confirm the power of the Secretary of the Department of Environment and Natural Resources and the DENR Regional Executive Directors to grant or deny the issuance of ECCs.

22. Section 3 of PD 1586 mandates the National Environmental Protection Council to review and evaluate the environmental impact statements on declared ECPs and ECAs. The National Environmental Protection Council and National Pollution Control Commission were merged in June 1987, and by virtue of Executive Order 192, became the Environmental Management Bureau (EMB). The EMB became a line bureau of the DENR pursuant to Republic Act 8749 (Philippine Clean Air Act) in 1999. The DENR is tasked to administer the EIS System through the EMB and its regional offices (ROs). The DENR-EMB central office reviews and processes ECPs while the DENR-EMB ROs review and approve projects considered to be located in ECAs, as well as projects outside the purview of the EIS system.

23. DENR Administrative Order No. 30, series of 2003 categorized single projects into three major groups:

- Group I: ECPs in either ECAs or Non-ECAs
  - (i) Golf course
  - (ii) Heavy industries
  - (iii) Fishery
  - (iv) Logging
  - (v) Grazing projects
  - (vi) All projects introducing exotic fauna in public and private forests
  - (vii) Major wood processing
  - (viii) Major mining and quarrying projects
  - (ix) Major listed infrastructure projects
- Group II: Non-ECPs in ECAs;
  - (i) Agriculture industry
  - (ii) Buildings, storage facilities and other structures
    - a. Chemical industries
    - b. Cottage industries
    - c. Demonstration and pilot projects
    - d. Environmental enhancement and mitigation projects
    - e. Food and related industries
    - f. Packaging materials and miscellaneous products industries
    - g. Pipeline projects
    - h. Textile, wood and rubber industries
    - i. Tourism industry
    - j. Transport terminal facilities
    - k. Waste management projects
    - l. Water supply, irrigation or flood control projects
    - m. Treasure hunting in National Integrated Protected Areas System (NIPAS)
    - n. Wildlife farming or any related projects as defined by PAWB
- Group III: Non-ECPs in Non-ECAs – All Group II project types outside ECAs

24. Environmentally critical projects require the completion of an EIA and the submission of an EIS report (Group I) while projects in ECAs (Group II) require the preparation of an IEE Report. DENR determines if a project is an ECP or if a project will be implemented in an ECA. If either or both of these conditions apply, the proposal is required to secure an ECC. Otherwise, DENR – EMB or the regional offices can issue a Certificate of Non-Coverage (CNC) certifying that the project will not significantly affect the environment (Group III).

25. **Procedural requirements and responsibilities.** The project subscribes to ADB's Safeguards Policy Statement (SPS) 2009 and all applicable national environment related laws, regulations and administrative orders. Based on the Department of Environment and Natural Resources – Environmental Management Bureau (DENR-EMB) Memorandum Circular (MC) 005, series of 2014 (Revised Guidelines for Coverage Screening and Standardized Requirements under the PEISS), **construction of new buildings such as schools, including storage facilities with no hazardous or toxic materials, with total/gross floor area that includes parking, open space and other areas of less than 1 hectare, is not covered by the PEISS.** The expansion, modification and/or rehabilitation of existing buildings requires securing or amending the ECC through the submission of an Environmental Performance Report and Management Plan to the DENR–EMB regional office where the project is located. A Building Permit must be secured from the local government unit where the facility will be constructed in compliance with Presidential Decree No. 1096 (National Building Code of the Philippines) before any type of building construction or repair work can start. All the Certificates of Non-coverage that have been secured are presented in **APPENDIX**. The project will ensure that all the remaining ECCs / CNCs that have not been secured yet will be secured prior to construction.

**Table 2: Philippine Environmental Impact Assessment Requirements**

|  |  |
|--|--|
| Environmental Compliance Certificate Amendment | For existing facilities with issued ECC built since 1982 that will be rehabilitated, secure the ECC amendment by filing Environmental Performance Report and Management Plan (EPRMP) with DENR-EMB regional offices  |
| Certificate of Non-coverage (CNC)              | <p>For existing facilities (with no ECC from DENR-EMB) built since 1982 that will be rehabilitated, secure CNC through the DENR-EMB online system by filing Project Description.</p> <p>For existing facilities built before 1982 that will be rehabilitated, secure CNC through DENR-EMB online system by filing Project Description and Proof of Project Implementation prior to 1982 without expansion / alteration / modification.</p> <p>For new facilities, secure CNC through the DENR–EMB online system by filing Project Description.</p> |

DENR-EMB = Department of Environment and Natural Resources – Environmental Management Bureau

### **C. Environmental Standards**

26. The national environmental standards in the Philippines are based on Presidential Decree No. 1152 or the Philippine Environment Code, which orders the establishment of ambient air quality standards, national emission standards for new and existing stationary and mobile sources of pollution, community noise levels, standard for noise-producing equipment, classification standards for receiving bodies of water, effluent standards, guidelines for waste management, and liquid waste disposal.<sup>1</sup> Table below shows the National Ambient Air Quality Guideline Values as compared to World Health Organization (WHO) Ambient Air Quality Guideline Values.

<sup>1</sup> Presidential Decree No. 1152. Philippine Environment Code. 6 June 1977.

**Table 3: National and WHO Ambient Air Quality Guideline Values**

| Pollutants        | Short Term (24 hours averaging time), $\mu\text{g}/\text{m}^3$ |     | Long Term (1 year averaging time), $\mu\text{g}/\text{m}^3$ |     |
|-------------------|--|-----|---|-----|
|                   | Philippines  | WHO | Philippines   | WHO |
| TSP               | 230  | -   | 90  | -   |
| PM <sub>10</sub>  | 150  | 50  | 60  | 20  |
| PM <sub>2.5</sub> | 50 <sup>2</sup>  | 25  | 25  | 10  |

27. Section 74 to 79 of the issued rules and regulations of Presidential Decree (PD) 984 of the then National Pollution Control Commission in 1978 specified the noise control regulations and defined the environmental quality standards for noise in general areas. Table below shows the national environmental quality standards for noise in general areas. Subsequent table shows WHO Guidelines for Community Noise.

**Table 4: National Environmental Quality Standards for Noise in General Areas**

| Category of Area   | Maximum allowable noise by time period, dB |  |                        |
|--|--|--|------------------------|
|  | Daytime (9 AM–6 PM)                        | Morning and Evening (5–9 AM & 6–10 PM) | Nighttime (10 PM–5 AM) |
| AA – section or area which requires quietness, such as an area within 100 m from school sites, nursery schools, hospitals and special homes for the aged | 50   | 45                                     | 40                     |
| A – residential purposes   | 55   | 50                                     | 45                     |
| B – commercial area  | 65   | 60                                     | 55                     |
| C – light industrial area  | 70   | 65                                     | 60                     |
| D – reserved as a heavy industrial area  | 75   | 70                                     | 65                     |

**Table 5: WHO Guidelines for Community Noise**

| Receptor                                | One Hour L <sub>Aeq</sub> (dBA) |                        |
|---|---------------------------------|------------------------|
|   | Daytime 07:00 – 22:00           | Nighttime 22:00 – 7:00 |
| Residential; institutional; educational | 55                              | 45                     |
| Industrial; commercial                  | 70                              | 70                     |

28. Based on DENR Administrative Order No. 08, series of 2016 (Water Quality Guidelines and General Effluent Standards of 2016), the significant effluent quality parameters<sup>3</sup> applicable for the Project includes BOD, Fecal Coliform, Ammonia, Nitrate, Phosphate, Oil and Grease, and all significant parameters depending on the nature of their activity.

**Table 6: Effluent Standards**

| Parameter                       | Unit        | AA  | A     | B     | C      | D      | SA  | SB    | SC     | SD     | WB-IFC EHS |
|---------------------------------|-------------|-----|-------|-------|--------|--------|-----|-------|--------|--------|------------|
| BOD                             | mg/L        | NDA | 20    | 30    | 50     | 120    | NDA | 30    | 100    | 150    | 30         |
| Ammonia – as NH <sub>3</sub> -N | mg/L        | NDA | 0.5   | 0.5   | 0.5    | 7.5    | NDA | 0.5   | 0.5    | 7.5    | -          |
| Fecal coliform                  | MPN/ 100 mL | NDA | 4     | 200   | 400    | 800    | NDA |       |        |        | -          |
| Total coliform                  | MPN/ 100 mL | NDA | 3,000 | 3,000 | 10,000 | 15,000 | NDA | 3,000 | 10,000 | 15,000 | 400        |

<sup>2</sup> DENR Administrative order No 20123-13. [Establishing the Provisional National Ambient Air Quality Guideline Values for Particulate Matter 2.5](#). 7 March 2013.

<sup>3</sup> Education (Public and private education, including support services).

| Parameter                     | Unit | AA  | A  | B  | C   | D   | SA  | SB  | SC  | SD  | WB-IFC EHS      |
|-------------------------------|------|-----|----|----|-----|-----|-----|-----|-----|-----|-----------------|
| Nitrate as NO <sub>3</sub> -N | mg/L | NDA | 14 | 14 | 14  | 30  | NDA | 20  | 20  | 30  | 10 <sup>4</sup> |
| Phosphate                     | mg/L | NDA | 1  | 1  | 1   | 10  | NDA | 200 | 400 | 800 | 2 <sup>5</sup>  |
| Oil and grease                | mg/L | <1  | 1  | 1  | 2   | 5   | 1   | 2   | 3   | 5   | 10              |
| Total suspended solids        | mg/L | NDA | 70 | 85 | 100 | 150 | NDA | 70  | 100 | 150 | 50              |

Note: NDA = no discharge allowed; MPN=— most probable number

**Table 7: Water Body Classification and Usage of Freshwater**

| Classification | Intended Beneficial Use  |
|----------------|--|
| Class AA       | Public Water Supply Class I – Intended primarily for waters having watershed, which are uninhabited and / or otherwise declared as protected areas, and which require only approved disinfection to meet the latest Philippine National Standards for Drinking Water |
| Class A        | Public Water Supply Class II – Intended as sources of water supply requiring conventional treatment (coagulation, sedimentation, filtration and disinfection) to meet the latest PNSDW   |
| Class B        | Recreational Water Class I – Intended for primary contact recreation (bathing, swimming, etc.)   |
| Class C        | 1. Fishery Water for the propagation and growth of fish and other aquatic resources<br>2. Recreational Water Class II – For boating, fishing, or similar activities<br>3. For agriculture, irrigation and livestock watering   |
| Class D        | Navigable waters   |

Note: For unclassified water bodies, classification shall be based on the beneficial use as determined by the Environmental Management Bureau (EMB)

**Table 8: Water Body Classification and Usage of Marine Waters**

| Classification | Intended Beneficial Use  |
|----------------|--|
| Class SA       | 1. Protected Waters – Waters designated as national or local marine parks, reserves, sanctuaries, and other areas established by law (Presidential Proclamation 1801 and other existing laws), and/or declared as such by appropriate government agency, LGUs, etc.<br>2. Fishery Water Class I – Suitable for shellfish harvesting for direct human consumption |
| Class SB       | 1. Fishery Water Class II – Water suitable for commercial propagation of shellfish and intended as spawning areas for milkfish ( <i>Chanos chanos</i> ) and similar species<br>2. Tourists Zone – For ecotourism and recreational activities<br>3. Recreational Water Class I – Intended for primary contact recreation (bathing, swimming, skin diving, etc.)   |
| Class SC       | 1. Fishery Water Class III – For the propagation and growth of fish and other aquatic resources and intended for commercial and sustenance fishing<br>2. Recreational Water Class II – For boating, fishing, or similar activities<br>3. Marshy and/or mangrove areas declared as fish and wildlife sanctuaries  |
| Class SD       | Navigable waters   |

29. **Solid Waste.** Republic Act 9003 or the Ecological Solid Waste Management Act of 2000 governs the solid waste management in the Philippines. The policy promotes the utilization of environmentally-sound methods that maximize the utilization of valuable resources; sets guidelines and targets for solid waste avoidance and volume reduction through source reduction and waste minimization measures<sup>6</sup>; ensure the proper segregation, collection, transport, storage, treatment and disposal of solid waste through the formulation and adoption of the best environmental facilities; and ensure the integration of ecological solid waste management and

<sup>4</sup> Total nitrogen.

<sup>5</sup> Total phosphorus.

<sup>6</sup> These include composting, recycling, reuse, recovery, and others, prior to collection, treatment and disposal.

resource conservation and recovery topics into the academic curricula of formal and non-formal education to promote environmental awareness and action among citizenry.

30. **Hazardous Wastes.** Republic Act 6969, otherwise known as the Toxic Substances and Hazardous and Nuclear Wastes Control Act mandates the control and management of import, manufacture, process, distribution, use, transport, treatment and disposal of toxic substances and hazardous and nuclear wastes in the country. DENR Administrative Order No. 2000-02 or Chemical Control Order for Asbestos governs the regulations for the importation, manufacture and use of asbestos and the storage, transport and disposal of their wastes.

31. Table below contains the summary of environmental legislations applicable to the Project.

**Table 9: Summary of Environmental Legislations Applicable to the Proposed Project**

| No. | Legislation Number                    | Legislation Title  | Relevance to the Project  | Responsible Institution  |
|-----|---------------------------------------|--|---|--|
| 1   | Presidential Decree 1151 (1977)       | Philippine Environmental Policy  | Project proponent is not required to prepare an environmental impact statement or initial environmental examination of proposed action, project or undertaking.   | Ministry of Natural Resources (1974-1987)                        |
| 2   | Presidential Decree 1586 (1978)       | Philippine Environmental Impact Statement System   | Establishment of Philippine environmental impact statement (EIS) system based on Section 4 of Presidential Decree 1151  | Ministry of Natural Resources (1974-1987)                        |
| 3   | Presidential Proclamation 2146 (1981) | Proclaiming Certain Areas and Types of Projects as Environmentally Critical and Within the Scope of EIS Established under PD 1586  | Proclamation of areas and types of projects as environmentally critical and within the scope of Philippine EIS system   | Ministry of Natural Resources (1974-1987)                        |
| 4   | Presidential Decree 1121 (1977)       | Creating the National Environmental Protection Council   | Creation of the National Environmental Protection Council as a central authority that will oversee, unify and integrate the planning, management, and implementation of the government's environment program  | National Environmental Protection Council (1977 – 1987)          |
| 5   | Executive Order No. 192 (1987)        | Reorganization Act of the Department of Environment and Natural Resources  | Providing for the reorganization of the Department of Environment, Energy and Natural Resources, renaming it as the Department of Environment and Natural Resources and for other Purposes  | Department of Environment and Natural Resources (1987 – present) |
| 6   | DENR Administrative Order No. 2002-17 | Defining the Organizational Structure and Major Responsibilities of the Environmental Management Bureau as a line Bureau by virtue of Section 34 of the Philippine Clean Air Act of 1999 (RA 8749) | Strengthening the enforcement and implementation of major environmental laws such as Presidential Decree 984 – Pollution Control Law; Presidential Decree 1586 – The Environmental Impact Assessment Law; Republic Act 6969 – Toxic Substances and Hazardous and Nuclear Wastes Control Act; Republic Act 8749 – Philippine Clean Air Act of 1999; and Republic Act 9003 – Ecological Solid Wastes Management Act, among others | DENR and EMB   |
| 7   | DENR Administrative                   | Implementing Rules and Regulations for the   | Incorporation of environmental considerations into the Environmental  | DENR and EMB   |

| No. | Legislation Number             | Legislation Title  | Relevance to the Project   | Responsible Institution                                    |
|-----|--------------------------------|--|--|--|
|     | Order No. 30, (2003)           | Philippine Environmental Impact Statement System   | Impact Assessment (EIA) process at an early stage to streamline the current procedure in the conduct of the EIA process to improve the effectiveness as a planning, regulatory and management tool, and enhance maximum public participation |  |
| 8   | Republic Act 6969 (1990)       | Toxic Substances and Hazardous and Nuclear Wastes Control Act  | Control and management of import, manufacture, process, distribution, use, transport, treatment and disposal of toxic substances and hazardous and nuclear wastes in the country   | DENR and EMB   |
| 9   | Republic Act 8749 (1999)       | Philippine Clean Air Act of 1999   | Comprehensive air quality management policy and program with the objective of achieving and maintaining healthy air for all Philippine citizens  | DENR and EMB   |
| 10  | Republic Act 9003 (2000)       | Ecological Solid Wastes Management Act   | Provides guidelines for ecological solid waste management program and creating the necessary institutional mechanisms and incentives as well as prohibitions and penalties   | National Solid Waste Management Commission (NSWMC) and EMB |
| 11  | Republic Act 9275 (2004)       | Philippine Clean Water Act of 2004   | Applies to water quality management in all water bodies. Primarily applies to abatement and control of pollution from land-based sources   | DENR and EMB   |
| 12  | Republic Act 7586 (1992)       | National Integrated Protected Areas System Act   | Establishment of a comprehensive system of integrated protected areas within the classification of national park to secure the present and future generations the perpetual existence of all native plants and animals                       | DENR   |
| 13  | DAO 08, series of 2016         | Water Quality Guidelines and General Effluent Standards of 2016  | Amended DAO 34 and 35 series of 1990.  | DENR and EMB   |
| 14  | Republic Act 10066 (2009)      | National Cultural Heritage Act of 2009   | Provides for the protection and conservation of the national cultural heritage, strengthening the National Commission for Culture and the Arts (NCCA) and its affiliated cultural agencies   | National Commission for Culture and the Arts (NCCA)        |
| 15  | Presidential Decree 953 (1976) | Requiring the planting of trees in certain places and penalizing unauthorized cutting, destruction and damaging and injuring on certain trees, plants and vegetations destruction, damaging and injuring of certain trees, plants and vegetation | Guidelines on planting of trees and penalty for cutting and damaging of trees  | Bureau of Forest Development (BFD)                         |
| 16  | Republic Act 11058 (2018)      | An Act Strengthening Compliance with Occupational Safety and Health Standards and  | Aims to ensure a safe and healthful workplace for all workers by affording them full protection against all hazards in their work environment. Rules apply to contractors and  | Department of Labor and Employment (DOLE)                  |

| No. | Legislation Number                  | Legislation Title  | Relevance to the Project   | Responsible Institution                         |
|-----|-------------------------------------|--|--|---|
|     |                                     | Providing Penalties for Violations thereof   | subcontractors including projects in the public sector   |   |
| 17  | Republic Act 9729 (2009)            | Climate Change Act of 2009   | Mainstreaming climate change into government policy and establishing framework strategy and program for its implementation   | Climate Change Commission (CCC)                 |
| 18  | Executive Order 174 (2014)          | Institutionalizing Philippine Greenhouse Gas Inventory Management and Reporting System | Institutionalization of GHG inventory management and reporting system in relevant government agencies to ensure transition towards a climate-resilient pathway for sustainable development.                    | Climate Change Commission (CCC)                 |
| 19  | DENR Administrative Order 2013-24   | Chemical Control Order (CCO)   | Set a 90 ppm total lead content limit in paint. The CCO provided for a three-year phase out period from 2013 to 2016 for lead-containing paints used for architectural, decorative and household applications. | Department of Environment and Natural Resources |
| 20  | DENR Administrative Order 2000 - 02 | Chemical Control Order for Asbestos  | Requirements and procedures related to the importation, manufacture and use of asbestos and the storage, transport and disposal of their wastes.   | Department of Environment and Natural Resources |

#### D. Permitting Requirements

32. Table below details the procedural requirements for the expansion, modification, and/or rehabilitation of TTIs and construction of RTICs, as well as the responsibilities of TESDA, the National Project Management Unit, Regional Project Management Unit, the Project Management Consulting (PMC) Firm, the DSC Firm, and Contractors. No significant non-compliance of existing facilities with government environment requirements has been observed during various consultations with TTIs. Basic environmental and utility services (water supply, wastewater treatment, and drainage) will be improved as part of upgrading of TTI facilities. The project will ensure that all the requisite clearances and permits will be secured prior to construction, and that necessary clearances (including fire safety inspection certificate and occupancy permits are secured prior to facility operation.

**Table 10: Procedural Requirements for Environmental Compliance, Construction Permits and License to Operate**

| Item                                 | Procedural Requirement  | Responsible Entity             | Approval Entity   |
|--------------------------------------|---|--------------------------------|---|
| <b>Pre-construction</b>              |   |                                |   |
| Facility design, permit to construct | Upgrade TESDA technology institutions and design the new regional training innovation centers following the National Building Code of the Philippines, other relevant national regulations, and international standards.<br><br>Prepare the Architectural and Engineering Design and documentation (signed and sealed by architect and engineers) and other requirements to secure building permits and licenses prior to construction. | Contractor, PMC Firm, DSC Firm | TESDA, City or Municipal Engineering Office of local government units |
| ECC Amendment                        | For existing facilities with issued ECC built since 1982 that will be rehabilitated, secure the ECC amendment by filing Environmental Performance Report and  | RPMU                           | DENR-EMB regional offices   |

| Item                               | Procedural Requirement  | Responsible Entity          | Approval Entity   |
|------------------------------------|---|-----------------------------|---|
|                                    | Management Plan (EPRMP) with DENR-EMB regional offices  |                             |   |
| CNC                                | <p>For existing facilities (with no ECC from DENR-EMB) built since 1982 that will be rehabilitated, secure CNC through the DENR-EMB online system by filing Project Description.</p> <p>For existing facilities built before 1982 that will be rehabilitated, secure CNC through DENR-EMB online system by filing Project Description and Proof of Project Implementation prior to 1982 without expansion / alteration / modification.</p> <p>For new facilities, secure CNC through the DENR – EMB online system by filing Project Description.</p>  | RPMU                        | DENR-EMB regional offices   |
| Local permits                      | Secure the Building Permit, Sanitary Permit, Electrical Permit, and other permits from the local government prior to construction.  | Contractor, RPMU            | LGU   |
| Fire Safety Evaluation Clearance   | Submit building plan, pertinent documents and Fire and Life Safety Assessment Report (FALAR) to the city/municipal Fire Marshal to secure the Fire Safety Evaluation Clearance prior to construction.   | Contractor, RPMU            | City / Municipal fire marshal                                     |
| Height Clearance Permit            | Submit elevation plan of proposed structure and Certification of Geodetic Engineer – i) Geodetic Coordinates (WGS-84 Datum) and True Ground Elevation in meters above mean sea level / Orthometric Height of the site; ii) Location Plan with Vicinity Map; and iii) Copy of the original field notes, traverse computations and GPS processing notes including raw data (total station data should be in ASCI format and RINEX format in GPS), signed and sealed by a Geodetic Engineer. Complete requirements can be found here - <a href="https://caap.gov.ph/height-clearance-permit-and-limitation-form/">https://caap.gov.ph/height-clearance-permit-and-limitation-form/</a> | Contractor, RPMU            | Civil Aviation Authority of the Philippines (CAAP)                |
| Tree Cutting Permit                | Submit letter of application and LGU Endorsement/ Certification of No Objection from the Municipality/City and Barangay. Submit as well copy of Land Title (OCT/TCT) and photographs of trees to be removed. Please include Site Development Plan and Environmental Compliance Certificate  | Contractor, RPMU            | Community Environment and Natural Resources Office (CENRO) - DENR |
| <b>Construction</b>                |   |                             |   |
| EMP monitoring                     | Monitor the implementation of the EMP by the Contractor   | NPMU, PMC, RPMU             | TESDA, ADB  |
| Progress reporting                 | Submit quarterly progress reports on the status of construction and EMP implementation to the TESDA and PMU   | NPMU, PMC, RPMU, Contractor | TESDA, ADB  |
| <b>Post-construction</b>           |   |                             |   |
| Fire Safety Inspection Certificate | Secure a Fire Safety Inspection Certificate from the city/municipal Fire Marshal.   | Contractor, RPMU            | Municipal fire marshal  |
| Occupancy Permit                   | Secure an Occupancy Permit from the local government  | Contractor                  | LGU   |
| Completion Report                  | Submit a completion report with as-built drawings to TESDA during turn-over.  | Contractor, RPMU            | NPMU, TESDA   |

## **E. International Conventions**

33. This section reviews all the relevant international agreements and commitments, existing institutions and legislations, both at the national and local levels. The Philippines is a member of various international agreements, conventions and treaties for conservation of the environment at global level. Some of the international agreements where the Philippines is a party and applicable to the proposed Project are discussed in the following sections.

34. **United Nations Convention on Sustainable Development (UNCSD).** Also known as Rio+20 or Earth Summit 2012, the UNCSD is the third conference on Sustainable Development. It followed the 1992 Earth Summit/United Nations Conference on Environment and Development. UNCSD is the key forum for the consideration of issues related to the integration of the three dimensions of sustainable development: economic development, social inclusion and environmental protection. As such, its mandate is not limited to environmental issues.

35. **Stockholm Convention, 2004.** The Stockholm Convention is a global treaty to protect human health and the environment from the adverse effects of persistent organic pollutants (POPs). Adopted in 2001 and entered into force in 2004, the convention requires its parties to take measures to eliminate or reduce the release of POPs into the environment.

36. **United Nations Framework Convention on Climate Change, 2003.** The United Nations Framework Convention on Climate Change (UNFCCC) is an international treaty focusing on what countries could do to limit average global temperature increases and the resulting climate change. The ultimate objective of the convention is the stabilization of greenhouse gas concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system. In 2013, both non-Annex (including the Philippines) and Annex I members to the UNFCCC were requested to prepare their Intended Nationally Determined Contributions. Activities/Goals set under the Intended Nationally Determined Contributions, regardless of the legal nature of the contributions, will serve as the first Nationally Determined Contribution of the respective parties for the period beyond the Doha Amendment, upon ratification of the Paris Agreement.

37. **Kyoto Protocol, 2003.** The Kyoto Protocol is an international treaty under the UNFCCC. Adopted in 1997, the protocol commits 43 Annex I countries to limit their greenhouse gas emissions for the period 2008-2012 below or equal to the level of their emissions in 1990. By 2012, the Doha Amendment to the protocol was proposed to extend the protocol to a second commitment period for 2013-2020. However, only 37 countries have committed to binding targets. Binding targets for Kyoto Protocol are applicable only to Annex I (developed countries), and will end in 2020.

38. **Vienna Convention for Protection of the Ozone Layer, 1991 and Montreal Protocol on Substances Depleting the Ozone Layer, 1991:** The Vienna Convention outlines states' responsibilities for protecting human health and the environment against the adverse effects of ozone depletion, and established the framework under which the Montreal Protocol was negotiated. The Montreal Protocol stipulates that the production and consumption of compounds that deplete ozone in the stratosphere - chlorofluorocarbons, halons, carbon tetrachloride, and

methyl chloroform), are to be phased out by 2010. The project does not envisage production and consumption of ODS.

## **F. Regulatory Framework for Construction and Rehabilitation of Technical Education Facilities**

39. The Philippine Development Plan, 2017–2022 emphasizes the need to improve the quality of TVET training programs, integrate 21st century competencies, strengthen certification, improve research and innovation, and forge stronger links between TVET institutes and industry to increase employability of Filipino workforce, including women and the youth. The National Technical Education and Skills Development Plan 2018–2022 (NTESDP) identified priority industries and employment generators of TVET subsector, namely: (i) tourism; (i) construction; (iii) information and communication technology and business process management; (iv) transport, communication and storage; (v) agriculture, fisheries, and forestry (including processing); (vi) manufacturing including food manufacturing and electronics; and (vii) health, wellness, and other social services.

40. Republic Act 11293 or the Philippine Innovation Act of 2019 adopts a state policy fostering “innovation” as a vital component of the country’s development policies to drive inclusive development. The law broadly defines innovation as the creation of new ideas resulting in development of new or improved policies, products, services which are then spread or transferred across the market. It intends to harness innovation efforts to help the poor and the marginalized and enable national competitiveness of micro, small and medium enterprises in both domestic and global supply chains. Further, it identifies education institutions, private organizations, government agencies and local government units as key drivers of programs that stimulate innovation literacy and skills development for the Filipino workforce and entrepreneurs, including women and the youth.

41. TESDA has embodied in the NTESDP 2018–2022 the strategic direction for global competitiveness and workforce readiness with the objective of preparing the Philippine workforce to meet the requirements of the 4IR (TESDA Circular 060, series of 2020).

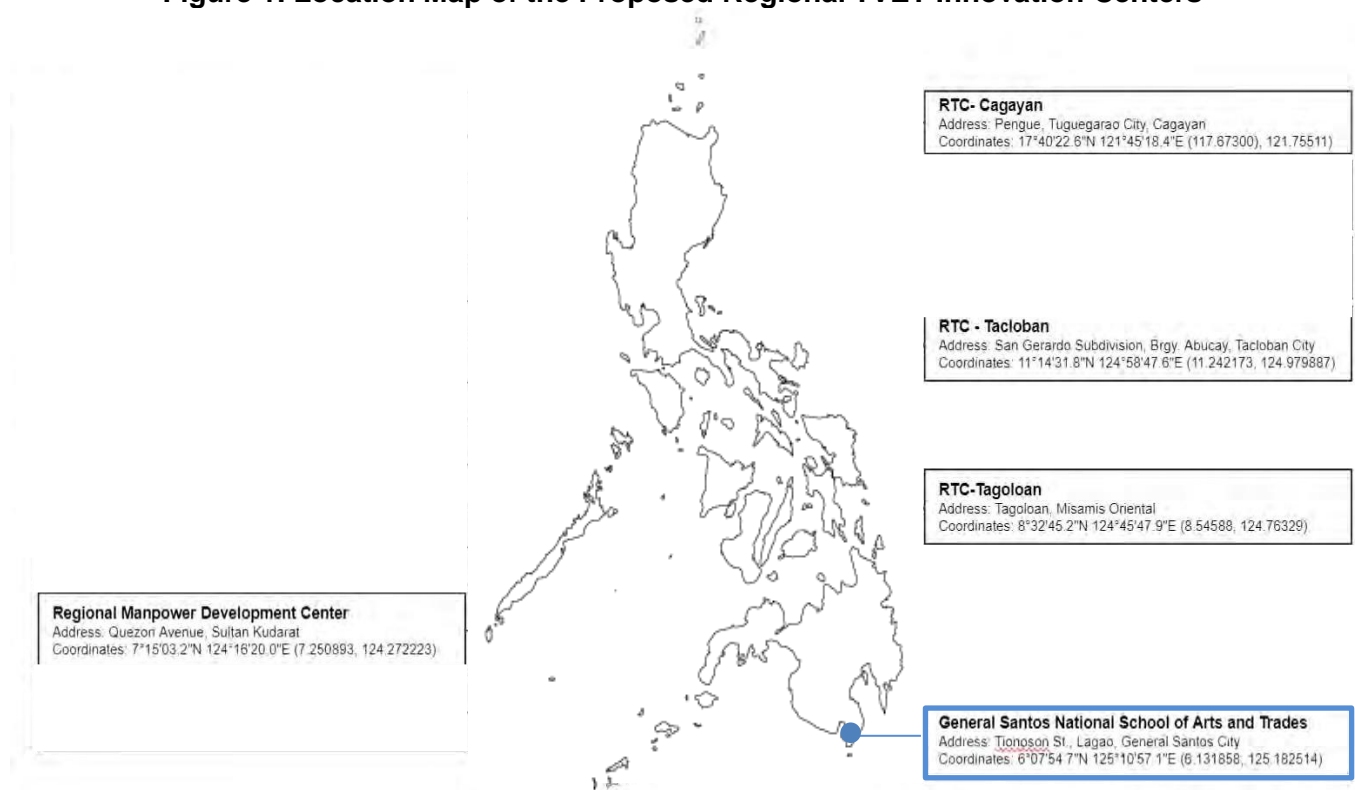

## **III. DESCRIPTION OF THE PROJECT**

### **A. Project Background**

42. To support the project’s outcome of employability of TVET graduates and improvement in equitable access to quality TVET, one of the outputs –. The selection was based on demand and supply side considerations. The TTIs and their regional innovation centers will prioritize the economic needs of the particular province, the government’s flagship “Build, Build, Build” program, and the priority sectors indicated in the National Technical Education and Skills Development Plan (NTESDP) 2018 – 2022. The project will link the TTIs and RTICs in a hub-and-spoke model with nearby higher education institutions and community-based training providers. The project will also adopt climate-smart, gender-responsive, and accessible designs while upgrading the TTIs and establishing the RTICs.

The site development plans of the 1TTIs are detailed in **APPENDIX 1**.

**Figure 1: Location Map of the Proposed Regional TVET Innovation Centers****Table 11: List of First 5 TESDA Training Institutions**

| Region | TTI   | Address  | Sector and Focus Area of Innovation  |
|--------|---|--|--|
| II     | Regional Training Center - Tuguegarao             | TESDA Building, Consuelo Village, Pengue, Tuguegarao City, Cagayan | Cold Chain   |
| VIII   | Regional Training Center - Tacloban               | Barangay Abucay, Tacloban City                                     | Farm Mechanization & Automation  |
| X      | Regional Training Center - Tagoloan               | Sta. Cruz, Tagoloan, Misamis Oriental                              | Manufacturing sector: Mechatronics, Industrial Automation and Control technology |
| XII    | General Santos National School of Arts and Trades | Tionoson St., Lagao, General Santos City                           | Warehousing & Logistics Management   |
| BARMM  | Regional Manpower Development Center              | RMDC Barangay Rebuken, Municipality of Sultan Kudarat, Maguindanao | Farm Mechanization & Automation  |

## B. Design Features of TTIs and RTICs

43. The repair works of TESDA Technology Institutions (TTIs) cover improvement of dilapidated architectural members, major structural retrofitting or general rehabilitation works, upgrading of existing water supply system, drainage and sewerage system to meet environmental, electrical and safety requirements.

44. The design of the RTICs, on the other hand, draws from the expertise of international TVET practitioners to ensure compliance with industry specifications and at par with international standards. The size of the proposed innovation center will be determined by the maximum construction cost for construction and limits of the selected project site within the TESDA RTC compound or complex. The indicative cost per square meter is employed to estimate the ballpark cost only. The site location, availability of materials, and mark-up costs will also play a factor in the final construction cost. The detailed architectural and engineering plans will guide the PMU and the ADB determine the bill of materials

45. The design and construction of new building will adhere to the Philippines' national building code and integrate climate change resilience and green building features, e.g., type of construction and materials, building orientation, elevation, drainage, roofing system and windows. It will also take into consideration climate factors such as the amount of rainfall, frequency and intensity of typhoon as well as wind and solar direction. In order to ensure sufficient natural light and ventilation to the building adequate setbacks on all sides will be met; owing to the necessity of providing vehicular access for material delivery the setbacks will be in excess of those required by the building by laws.

46. The proposed RTIC building will be designed to ensure efficient use of functional areas and allocation of adequate spaces for the trainees and trainers. Related functions will be planned in proximity with each other within each floor level and between floor levels of the building. Floor to ceiling height will take into account the requirements of the training equipment to be installed and allow their effective usage. The width of the corridor will be set to allow movement of required training equipment, i.e., installation, use and subsequent maintenance and/or replacement. It will be more than the prescribed corridor width of the National Building Code; and not less than 1.8 meters.

47. **Structural design.** The structural design will be in accordance with the Philippines National Structural Code. It will take into account soil characteristics, the loads and movement of training equipment for each facility, topography of the site, and environmental conditions. The main structure will be built using concrete and suitable materials per the specification of walls and windows. Measures will be integrated in the design to avoid termite infestation, such as use of steel for the roofing system and fiber cement board with metal furring for the ceiling.

48. **Sustainable architecture.** Solar energy will be harnessed by the building by installing panels on the roof. A maximum capacity of 25 kW can be generated, which will be used for lighting the building and perimeter. Adequate access from the second/third floor to the roof area will be provided to allow the maintenance of solar panels and the roofing system. Rainwater harvesting shall also be done through collection tanks, and after filtration shall be used for irrigation and flushing.

#### IV. DESCRIPTION OF THE ENVIRONMENT

49. This chapter describes the environmental condition at the proposed TTI sites where rehabilitation and upgrading of select TTIs and new construction of selected 16 RTICs will be done. The REA Checklist summary is in **APPENDIX 2** while detailed baseline condition in each of these TTIs is detailed in **APPENDIX 3**.

##### A. Existing Conditions at Selected TTI Sites

50. **Land availability.** All of the identified TTIs have sufficient land for the proposed rehabilitation of existing buildings and construction of new buildings.

51. **Transportation Access.** All of the identified TTIs are connected with existing national, provincial, or local roads and can be accessed through public transportation.

**Table 12: Information on Location, Elevation, Road Access, and Nearest Body of Water and Proof of Occupancy of select TTIs**

| Region | Name of TTI                                       | Location         |                   | Elevation, m | Classification of Road Access | Receiving Body of Water | Distance to Body of Water, m |
|--------|---|------------------|-------------------|--------------|-------------------------------|-------------------------|------------------------------|
|        |   | Latitude         | Longitude         |              |                               |                         |                              |
| II     | Regional Training Center-Tuguegarao               | 17° 40' 23" N    | 121° 45' 19" E    | 24           | National Primary road         | Cagayan River           | 2,400                        |
| VIII   | Regional Training Center - Tacloban               | 11° 14' 32.83" N | 124° 58' 47.99" E | 10           | Provincial road               | Coalargo Bay            | 140                          |
| XII    | General Santos National School of Arts and Trades | 6° 07' 57" N     | 125° 10' 55" E    | 30           | City road                     | Sarangani Bay           | 2,700                        |
| BARMM  | Regional Manpower Development Center              | 7° 15' 04"       | 124° 16' 16"      | 12           | Barangay road                 | Rio Grande de Mindanao  | 1,500                        |

## B. Existing Conditions of Proposed Regional Training Innovation Centers Sites

52. **Availability of Land and Proof of Occupancy.** All of the identified TTI sites have available land for the proposed innovation centers. The proof of occupancy includes deed of usufruct, presidential proclamation and republic act, deed of donation, tax declaration and land title.

## C. Topography and Natural Hazards

53. The Manila Observatory has developed risk maps of the Philippines' vulnerability to environmental hazards using data from the Philippine Institute of Volcanology and Seismology (PHIVOLCS) and the Earthquake and Natural Resource Atlas of the Philippines of 1998. Based on the geophysical hazards profiling, sites that are prone to earthquakes, earthquake-induced landslides, tsunamis and volcanic eruptions were identified.

54. **Earthquake.** Based on the Seismicity Map and the Earthquake Prone Areas of the Philippines, almost all regions have recorded earthquake events with moment magnitude greater than Mw 4.1, based on 25,100 historical and instrumentally recorded earthquake events from 1608 to 2016. The provinces that are at most risk to earthquakes include Leyte and South Cotabato. Leyte and General Santos have earthquake hazards due to the Philippine Fault Zone. Leyte and General Santos City will be evaluated further during detailed design to ensure that the innovation centers will be able to withstand strong earthquakes. The same will be done for other sites, since they are also prone to earthquakes, although of lesser occurrences and magnitude.

55. In terms of earthquake hazard, the Philippines was classified as High, or more than 20% chance of potentially damaging earthquake in the next 50 years, based on **ThinkHazard**, a web-based tool to consider the impacts of disasters on new development projects developed by the Global Facility for Disaster Reduction and Recovery (GFDRR, 2020)<sup>7</sup>. Regions II, VIII, X, XII, and BARMM are all classified as High.

56.

**Figure 5: Earthquakes and Fault Lines in the Philippines (Wong et al., 2014)**

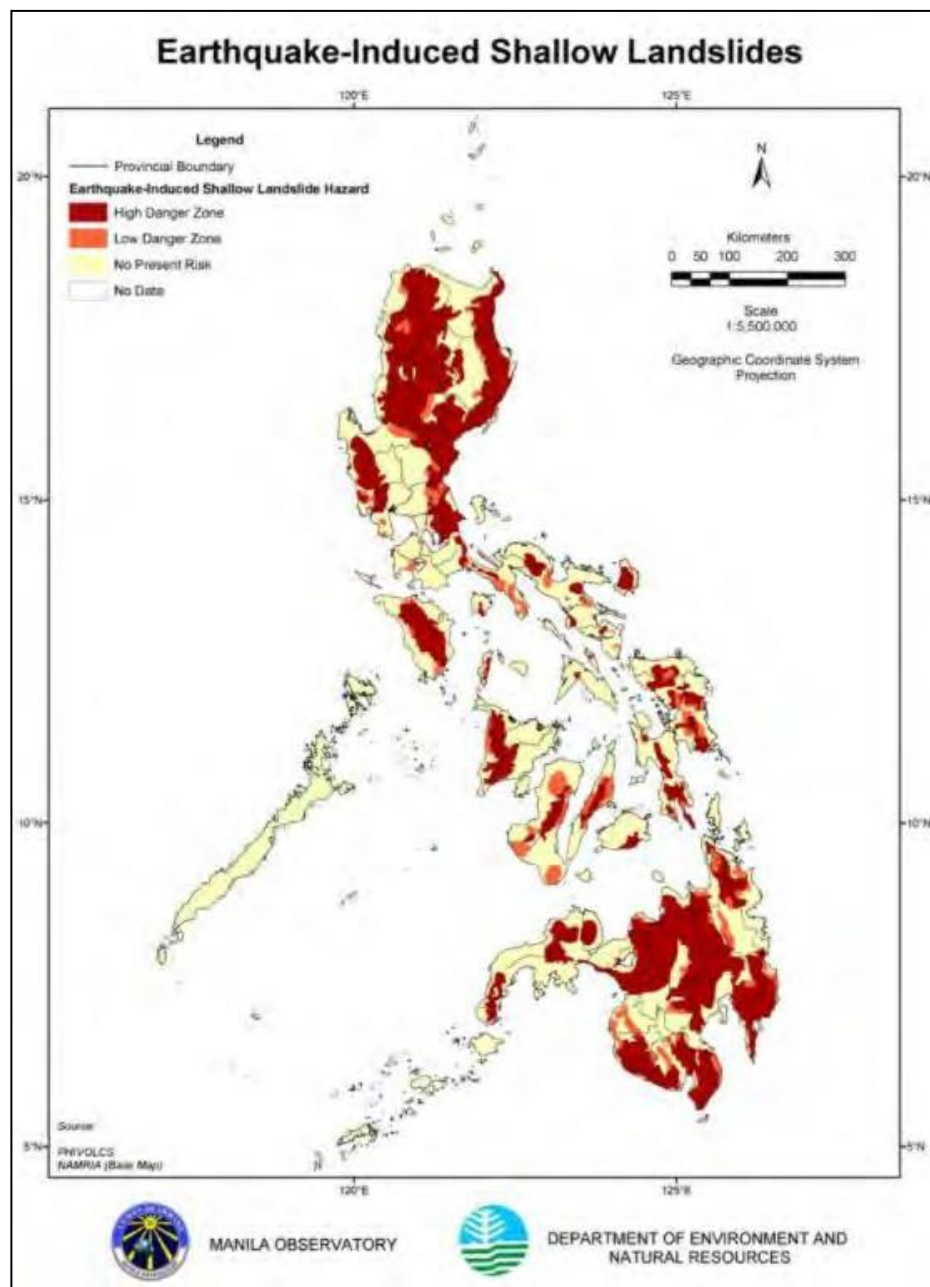

<sup>7</sup> Thinkhazard.org. [ThinkHazard! Identify natural hazards in your project area and understand how to reduce their impact: Philippines.](https://thinkhazard.org/)

57. **Earthquake-Induced Landslides.** Most of the provinces are susceptible to landslide hazards. Among the provinces selected for the project, Misamis Oriental are susceptible to landslide hazards. The susceptibility of TTI sites will be further evaluated during detailed design.

58. **Earthquake-Induced Landslides.** Most of the provinces are susceptible to landslide hazards. Among the provinces selected for the project, Misamis Oriental are susceptible to landslide hazards. The susceptibility of TTI sites will be further evaluated during detailed design.

**Figure 6: Earthquake-Induced Shallow Landslides in the Philippines**

59. **Tsunamis.** Regional Training Center – Tacloban (140 m from Coalargo Bay), Regional Training Center – Tagoloan (367 m), General Santos National School of Arts and Trades (2.7 km from Sarangani Bay) ), In terms of tsunami hazard, the TTIs that are most at risk from tsunami include the following:

- (i) Potential (Local Generators): RTC Tacloban, RTC Tagoloan, and Davao Oriental Polytechnic Institute;
- (ii) Potential (Local and Foreign Generators): General Santos National School of Arts and Trades<sup>8</sup>

60. The detailed design will consider the siting and design of building structures to minimize tsunami damages.

**Figure 7: Tsunami-Prone Areas in the Philippines**

<sup>8</sup> Philippine Institute of Volcanology. [Tsunami-Prone Areas in the Philippines.](#)

61. **Volcanic Eruptions.** PHIVOLCS classifies volcanoes according to its eruptive history. Active volcanoes are those that erupted within the last 600 years, and those that have written accounts of eruption within the last 10,000 years based on the analyses of materials from young volcanic deposits. Potentially active volcanoes, on the other hand, are those that are morphologically young-looking but with no historical or analytical records of eruption. Active volcanoes that are within 100 km from proposed TTIs include Mt. Parker, which is 30.72 km from General Santos National School of Arts and Trade.

**Figure 8: Distribution of Volcanoes in the Philippines**

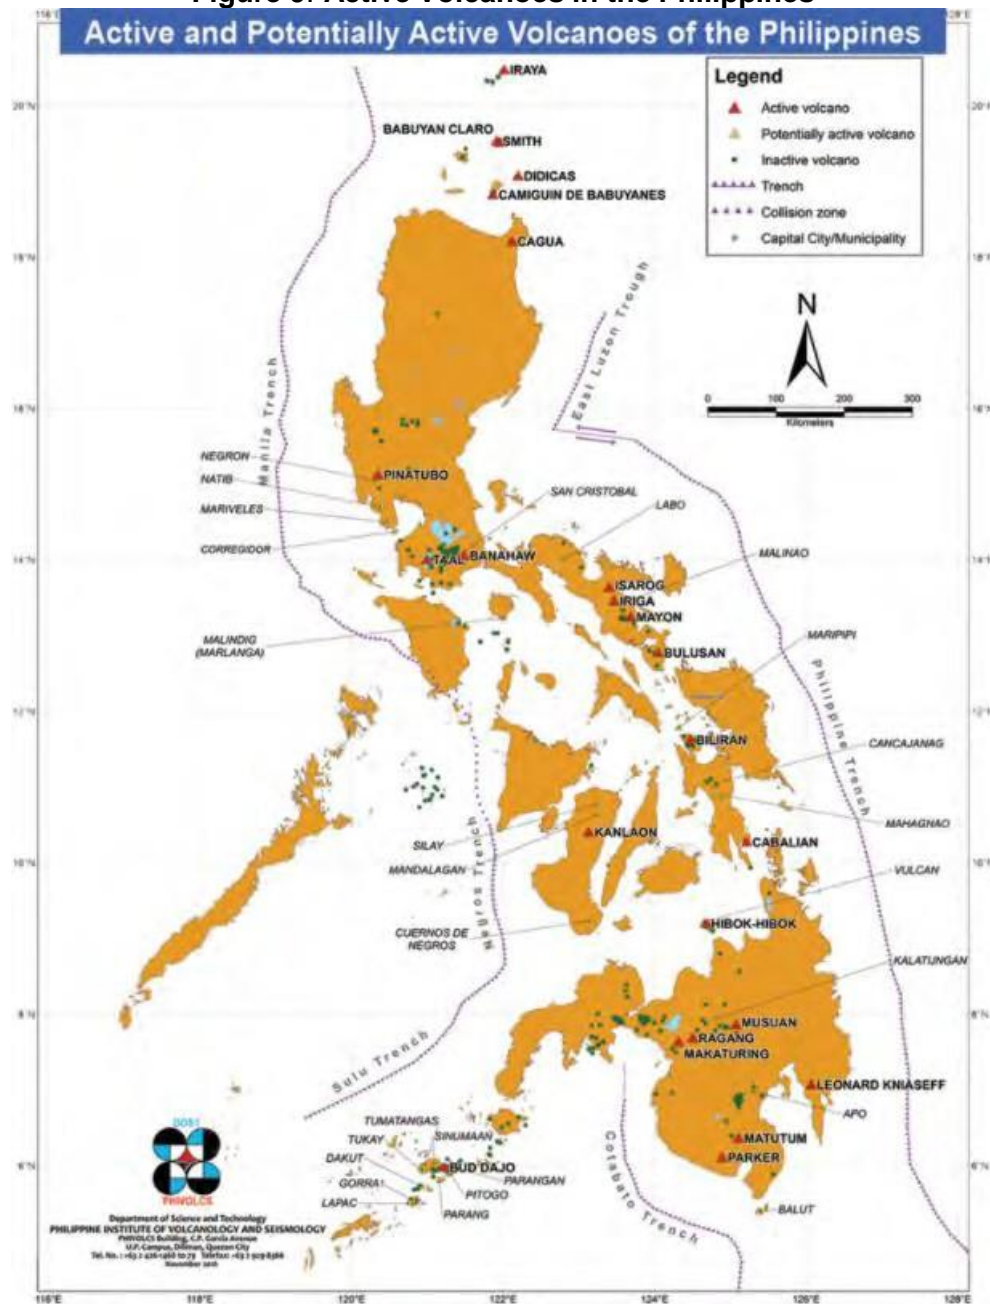

Figure 9: Active Volcanoes in the Philippines

62. **Tropical Cyclone (TC).** Approximately 19-20 tropical cyclones (TCs) enter the Philippine Area of Responsibility, with about 8 or 9 of them crossing the Philippines (PAGASA, 2021), which is equivalent to 25% of global occurrence (Huigen and Jens, 2006). In terms of frequency of tropical cyclones, Region II was the most affected, with 81-106 TCs from 1953-2010, Regions XII and BARMM received the lowest number, with 1-2 TCs for the same period. The technical team will evaluate further the design of innovation centers to mitigate the impact from typhoon.

**Figure 10: Frequency of Tropical Cyclones in the Philippines (1951-2013)**

63. **Flooding.** Data on predicted flooding were sourced from Project NOAH or the Nationwide Operational Assessment of Hazard, the Philippines' primary disaster risk reduction and management program, which was initially managed by the Department of Science and Technology (DOST) from 2012 to 2017, but is now under the management of the University of the Philippines.

64. Based on the flooding hazard assessment of NOAH, details of Flood Hazard Maps of which are indicated in **APPENDIX 3**, the TTIs most at risk for flooding include RTC Tuguegarao and RTC Tagoloan, where flooding may reach up to 1.5 meters during a 5-year return period. TTIs with low probability or no flooding, even a 100-year return period, include

Tacloban and General Santos National School of Arts and Trades, and Northern Mindanao School of Fisheries. The risks of flooding will be evaluated further by the technical team during detailed design.

**Table 13: Flood Hazards and Return Period of select TTIs**

| Region | Name of TTI                                       | Flood Hazard   | Flood Depth      | Return Period, years |
|--------|---|----------------|------------------|----------------------|
| II     | Regional Training Center - Tuguegarao             | Low to medium  | <0.5 m to 1.5m   | 5                    |
| VIII   | Regional Training Center - Tacloban               | Low            | up to 0.5 m      | 100                  |
| X      | Regional Training Center - Tagoloan               | High           | >1.5 m           | 5                    |
| XII    | General Santos National School of Arts and Trades | Low            | up to 0.5 m      | 100                  |
| BARMM  | Regional Manpower Development Center              | Medium to high | >0.5 m to >1.5 m | 100                  |

Note: Flood hazard – Low ( $\leq 0.5$  m); Medium ( $>0.5 - 1.5$  m); High ( $>1.5$  m)

65. **El Niño – Induced Drought.** Areas highly at risk to El Niño – induced drought include Sultan Kudarat, Misamis Oriental and Cebu. The technical team will assess the sustainability of water supply for proposed infrastructure during detailed design.

66. **Rainfall Change.** The risk to projected rainfall change incorporates both decrease during the dry season and increase during the wet season. Provinces included in the Project that are most at risk to projected rainfall changes are Leyte, Misamis Oriental and Sultan Kudarat. The design team will further evaluate the impact of rainfall change in the design of innovation centers.

**Figure 11: Risk to El Niño in the Philippines (1951-2013)**

## D. Climate

67. Philippine climate is characterized with relatively high temperature, humidity and rainfall. Rainfall varies regionally, which highly depend upon the direction of moisture-bearing winds and location of mountain ranges. The eastern parts of the country receive the highest amount of rainfall while the southernmost part of Mindanao receives the least. Based on the Modified Corona classification, the following are the four types of climate in the Philippines.

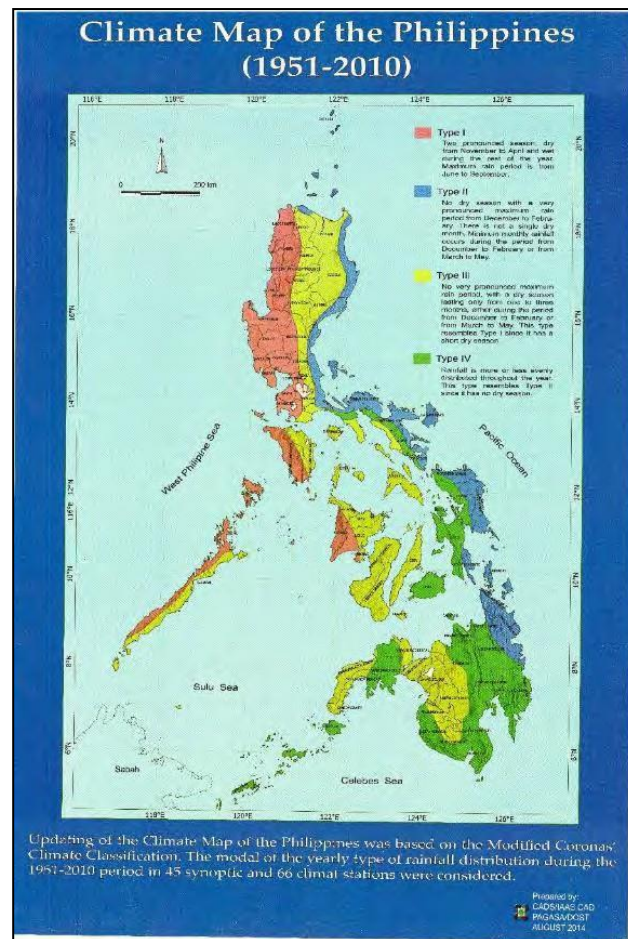

68. **Type I:** Two pronounced seasons, dry from November to April, and wet during the rest of the year. Maximum rain period is from June to September.

69. **Type II:** No dry season with a very pronounced maximum rain period from December to February. There is not a single dry month. Minimum monthly rainfall occurs during the period from March to May.

70. **Type III:** No very pronounced maximum rain period, with a short dry season lasting only from one to three months, either during the period from December to February or from March to May. This climate type resembles Type I since it has a short dry season. Provinces with this type of climate Misamis Oriental and Maguindanao.

71. **Type IV:** Rainfall is more or less evenly distributed throughout the year. This climate type resembles the second type more closely since it has no dry season. Provinces included in the project with this type of climate include Leyte.

**Figure 12: Modified Coronas Classification of Climate in the Philippines**

## E. Air Quality and Noise

72. There are no major industrial sources of air pollution in the vicinity of the TTIs, except from vehicle sources. Sources of noise come from residential, commercial and institutional sources within the vicinity of TTIs.

## F. Biological Resources

73. To determine if any TTI is located in any restricted zones of protected area or biodiversity conservation areas, Integrated Biodiversity Assessment Tool (IBAT) was used<sup>9</sup>. IBAT, which is a multi-institutional program of work involving BirdLife International, Conservation International,

<sup>9</sup> IBAT Proximity Report. Generated under licence 2099-16526 from the Integrated Biodiversity Assessment Tool on 16-18 March 2021; 21 and 24 May 2021 (GMT). [www.ibat-alliance.org](http://www.ibat-alliance.org).

International Union for Conservation of Nature (IUCN), and UN Environment Programme World Conservation Monitoring Centre (UNEP WCMC). The tool intends to provide a basic risk screening on biodiversity. Adjacent protected areas and key biodiversity areas within 10 km of TTI, using the IBAT tool are detailed in **APPENDIX 4**.

74. **Protected Areas.** The following TTIs are within 10 km of buffer zones of protected areas: RTC Tuguegarao (10 km), RTC Tacloban (10 km), General Santos National School of Arts and Trades (5 km).

75. **Key Biodiversity Areas.** Buffer zones of key biodiversity areas that are within 10 km from TTIs include: RTC Tuguegarao (10 km)

**Table 14. Protected and Key Biodiversity Areas Near TTIs**

| No. | Region | Name of TTI                           | Protected Area  | Key Biodiversity Area   |
|-----|--------|---------------------------------------|---|---|
| 3   | II     | Regional Training Center - Tuguegarao | Peñablanca Protected Landscape and Seascape (within 10 km of buffer zone)   | Peñablanca Protected Landscape and Seascape (within 10 km of buffer zone) |
| 11  | VIII   | Regional Training Center - Tacloban   | MacArthur Landing National Park (Imelda Park) (within 10 km of buffer zone) | No key biodiversity area within buffer distance                           |
| 13  | X      | Regional Training Center - Tagoloan   | No protected area within buffer distance                                    | No key biodiversity area within buffer distance                           |

| No. | Region | Name of TTI                                       | Protected Area   | Key Biodiversity Area                           |
|-----|--------|---|--|---|
| 15  | XII    | General Santos National School of Arts and Trades | Sarangani Bay Protected Landscape (within 5 km of buffer zone) | No key biodiversity area within buffer distance |
| 17  | BARMM  | Regional Manpower Development Center              | No protected area within buffer distance                       | Liguasan Marsh (1 km)                           |

## G. Power, Water and Telecommunications Infrastructure

76. All TTIs are connected with the electric grid provided by electric utility companies or cooperatives. Some TTIs source their water from the community water supply, while others have back-up deep well and overhead water tanks. Internet connections vary from 5 Mbps (copper cable) in RTC - Iloilo, up to 1 Gbps (fiber optics) in RTC - Tuguegarao.

**Table 15. Power, Water and Telecommunication Infrastructure**

| No. | Region | Name of TTI   | Power  | Water  | Telecommunication                                   |
|-----|--------|---|--|--|---|
| 1   | CAR    | Regional Training Center - Baguio                         | 220VAC Three-phase electrical connection   | Community water supply   | Fiber Optic: 100 Mbps                               |

## H. Climate Risk Vulnerability Assessment

### 1. Background

78. The Philippines is highly vulnerable to climate change impacts, which includes increased frequency of extreme weather events, sea level rise, rising temperatures, and extreme rainfall (USAID, 2017).<sup>10</sup> This is because of the country's high exposure to natural hazards such as typhoons, landslides, floods and droughts), dependence on natural resources which are sensitive to climate change, and the long coastlines where all major cities and bulk of the population reside. There are about 19-20 typhoons in the Philippines each year, of which about 7-9 make landfall. Sea levels are also rising faster than the global average, increasing storm surges and inundation hazard.

79. As a party to the United Nations Framework Convention on Climate Change, the country adopts its objective of stabilizing greenhouse gas concentrations in the atmosphere, to ensure that food production is not threatened and to ensure economic development to proceed in a sustainable manner. As one of the parties to the Hyogo Framework for Action, the country also adopts the strategic goals to build national and local resilience to climate change-related disasters. The Philippines has adopted Republic Act 9729 or the Climate Change Act of 2009 to provide the policy framework to systematically address the growing threats on community life and its impact on the environment.

80. The National Framework Strategy on Climate Change was adopted in April 2010 following the passage of Republic Act 9729 in 2009 (amended in 2012). The framework has been translated into a National Climate Change Action Plan for 2011–2028, which prioritizes food security, water sufficiency, ecological and environmental stability, human security, climate-smart industries and services, sustainable energy, and knowledge and capacity development. The Philippines ratified the Paris Agreement on March 23, 2017, with the objective of limiting global warming to well below 2, preferably to 1.5 °C compared to pre-industrial levels. The Philippines' Nationally Determined Contribution is to reduce GHG (CO<sub>2</sub> equivalent) emissions by 70% by 2030 compared to the business-as-usual scenario of 2000-2030. Reduction of CO<sub>2</sub> equivalent emissions will come from energy, transport, waste, forestry and industrial sectors.

### 2. Climate Baseline Conditions

81. The Philippines has exhibited increasing temperatures of 0.64 °C or an average of 0.01 °C per year-increase from 1951–2010. Maximum (daytime) and minimum (nighttime) temperatures are also seen to have increased by 0.36 °C and 0.1 °C, respectively in the last 59 years. There has also been a slight increase in the number of typhoons in the Visayas during the 30-year observation period from 1971-2000 compared with the 1951-1980 and 1960-1990 periods (PAGASA, 2011).

### 3. Future Climate Scenarios

82. According to Observed Climate and Projected Climate Change in the Philippines (Department of Science and Technology – PAGASA, 2018), observed temperature in the country is warming at an average rate of 0.1 °C every decade. Assuming the moderate emission scenario

<sup>10</sup> Climatelinks – A Global Knowledge Portal for Climate and Development Practitioners. [Climate Risk Profile: Philippines](#). USAID Factsheet (accessed 20 April 2021).

(RCP4.5), it is projected that the country-averaged mean temperature could increase by 0.9 C to 1.9 C, and 1.2 C to 2.3 C (considering the high emission scenario or RCP8.5) in mid-21<sup>st</sup> century.

83. Rainfall, on the other hand, is projected to be within the natural rainfall variations, except for the projected rainfall reduction over central sections of Mindanao. The projection is based on multi-model central estimate of projected changes in rainfall (Observed Climate and Projected Climate Change in the Philippines, DOST- PAGASA, 2018). It was likewise projected, based on the same study, that the high year-to-year variations in the frequency of occurrence and intensity of tropical cyclones will remain.

84. It was also projected by DOST-PAGASA that the sea level in the country will increase by approximately 20 cm by the end of the 21st century under RCP8.5 scenario. The projected increase in sea level is expected to worsen storm surge hazards in coastal communities.

## **V. ANTICIPATED ENVIRONMENTAL IMPACTS AND MITIGATING MEASURES**

### **A. Impact Assessment**

85. This section will identify the impacts of the proposed construction of innovation centers and other facilities on the physical, biological, and socio-economic environment of proposed TTIs. The identification of impacts was based on the project design, location, proposed activities during construction and operation, secondary information from national government agencies and online resources, and information gathered from consultations with safeguards focals of the select TTIs conducted from 8 – 22 February 2021, and with safeguards focals of 6 new TTIs on 26-28 May 2021.

86. Prior to the impact assessment process, two broad requirements are needed:

- a. What is in the receiving environment that may be affected by the project activities?
- b. What are the project activities that may affect the receiving environment?

87. The first requirement determines the elements of the environment that are considered important. This is called Valued Environmental Receptors (VERs). The second requirement will be listed, based on similar projects funded by ADB, and the proposed program of works (POW).

### **B. Valued Environmental Receptors**

88. Valued Environmental Receptors (VERs), which include the elements of the receiving environment which are considered to be important, were identified, based on review of available information and consultations with stakeholders. VERs are defined as fundamental elements of the physical, biological or socio-economic environment, including the air, water, soil, terrain, vegetation, fauna and land use that may be affected by a proposed project.

**Table 16: Valued Environmental Receptors**

| <b>Environment</b> | <b>Valued Environmental Receptors</b> | <b>Rationale and Relationship to the Project</b>   |
|--------------------|---------------------------------------|--|
| Physical           | Project location                      | <b>Earthquake hazards.</b> Regions II, VIII, X, XI, XII and BARMM are all classified as High (Global Facility for Disaster Reduction and Recovery, 2020). Regions IV-A, V, IX and NCR are considered medium. |

| Environment | Valued Environmental Receptors | Rationale and Relationship to the Project  |
|-------------|--------------------------------|--|
|             |                                | <b>Earthquake-induced landslides.</b> Misamis Oriental are susceptible to landslide hazards.   |
|             |                                | <b>Volcanic eruptions.</b> Active volcanoes that are within 100 km from proposed TTIs include Mt. Parker, which is 30.72 km from General Santos National School of Arts and Trade.   |
|             |                                | <b>Tropical cyclones.</b> Region II was the most affected, with 81-106 TCs from 1953-2010. BARMM received the lowest number, with 1-2 TCs for the same period. Region VIII also experienced Haiyan in 2013.  |
|             |                                | <b>Tsunami.</b> Potential tsunami generators in RTC Tacloban, RTC Tagoloan, Davao Oriental Polytechnic Institute, and General Santos National School of Arts and Trades.   |
|             | Land and soil condition        | Construction timing is important though as rainy and windy season impacts the soil condition.  |
|             | Topography and elevation       | <b>Flooding.</b> The TTIs most at risk for flooding include RTC Tuguegarao, RTC Tagoloan, where flooding may reach up to 1.5 meters during a 5-year return period. TTIs with low probability or no flooding, even a 100-year return period, include RTC – Tacloban, General Santos National School of Arts and Trades.   |
|             | Receiving body of water        | Effluent from gray water will contribute to water quality of nearby receiving bodies of water. Quality of effluent must be ensured prior to release to receiving water.  |
|             | Ground water                   | Regions II, X, XI, XII and BARMM depend on deep well for domestic water supply. Both quantity and quality of water must be ensured.  |
|             | Climate change                 | <p>Climate change impacts include increased frequency of extreme weather events, sea level rise, rising temperatures, and extreme rainfall.</p> <p><b>El Niño – induced drought.</b> Areas highly at risk to El Niño – induced drought include, Sultan Kudarat and Misamis Oriental.</p> <p><b>Rainfall change.</b> Provinces included in the Project that are most at risk to projected rainfall changes are Leyte, Misamis Oriental and Sultan Kudarat. The design team will further evaluate the impact of rainfall change in the design of innovation centers.</p> |

| Environment    | Valued Environmental Receptors               | Rationale and Relationship to the Project   |
|----------------|--|---|
| Biological     | Protected areas and key biodiversity areas   | <b>Protected areas.</b> The following TTIs are within 10 km of buffer zones of protected areas: RTC Tuguegarao (10 km), RTC Tacloban (10 km), General Santos National School of Arts and Trades (5 km).<br><br><b>Key biodiversity areas.</b> Buffer zones of key biodiversity areas (KBAs) that are within 10 km from TTIs include: RTC Tuguegarao (10 km) |
|                | Flora and Fauna                              | Trees will be cut in Regions II, VIII, and BARMM  |
|                | Fauna  | The Regional Manpower Development Center in BARMM, on the other hand, is covered by the IBA of Liguasan Marsh.  |
| Socio-economic | Access to technical and vocational education | The rehabilitation and construction of TTIs and RTICs will provide access to quality technical and vocational education in the selected regions.  |
|                | Infrastructure and access                    | All of the identified TTIs are connected with existing national, provincial, or local roads and can be accessed through public transportation.  |
|                |  | Existing TTI buildings will be demolished in Region II.   |
|                | Water supply                                 | All selected TTIs have dependable water supply. Sources include community water supply and/or deep well. Some TTIs have overhead tank for water storage.  |
|                | Vehicle traffic                              | The proposed construction of innovation centers and other facilities will entail the transportation of construction materials which may obstruct the flow of traffic where the construction vehicles will pass through.   |
|                | Acoustic environment                         | Construction of innovation centers and other facilities will generate noise that may impact both workers, students and faculty of TTIs, and surrounding community.  |
|                | Community and occupational health and safety | During construction of innovation centers and other facilities, there are risks on the health and safety of workers and the community, which may lead to injury and/or death.<br>TTI buildings to be rehabilitated may potentially contain asbestos or asbestos-containing materials that could put workers at risk.  |

89. **Project Activities.** The following project components and activities per phase that will have substantial interaction with the environment were identified:

- (i) Preconstruction stage:
  - a. Location and design of RTIC and other facilities
  - b. Consultation and securing of clearances from government agencies
  - c. Land survey
  - d. Survey of vegetation and tree cutting
  - e. Survey of TTI facilities that will be rehabilitated / replaced, including buildings to be demolished
  - f. Traffic planning
  - g. Capacity building on safeguards implementation and grievance redress

- (ii) Construction Phase
  - a. Site mobilization and construction of temporary facilities - establishment of storage areas for construction materials, mobilization of construction equipment and perimeter fencing
  - b. Management of wastes from demolished and/or repaired buildings
  - c. Construction of RTICs
  - d. Construction of dormitories and operation of other associated and related facilities
  - e. Management of construction activities- worker camps, stockpiles, solid wastes and wastewater
- (iii) Post-Construction Phase
  - a. Demobilization
  - b. Operation of RTICs and other facilities
  - c. Management of wastes from TVET activities
  - d. Monitoring

90. The assessment of impacts, both quantitatively and qualitatively, are based on the REA checklist (**APPENDIX 2**), and infrastructure and environmental questionnaires. Due to COVID-19 travel restrictions, consultations with safeguard focals of TTIs were conducted online from 8–22 February 2021, and 26–28 May 2021 with 6 new TTIs. Review of literature and environmental studies were also done.

91. These impacts can be classified as major, moderate, minor and negligible. Some of the impacts associated with the construction of RTICs include impacts on land, vegetation, receiving body of water, occupational health and safety during demolition or repair of old buildings (including potential exposure to asbestos or asbestos-containing materials), air quality impacts. Prevalent impacts during operation phase includes the management of solid waste and wastewater, sustainability of building and facilities, and climate change.

## **C. Evaluation of Impacts**

### **1. Beneficial Impacts**

92. The project is expected to have positive impact on the quality of TVET in the Philippines. Students who intend to pursue TVET will directly benefit from upgraded curriculum geared towards 4IR, and better facilities in innovation centers.

### **2. Adverse Impacts**

93. The identification of potential negative impacts requires the identification of the components of physical, biological and socio-economic environment that are at risk from the proposed construction of innovation centers and other facilities such as dormitories. A modified Leopold matrix, involving interactions between valued environmental receptors and project activities are proposed.

94. Negative impacts can be mitigated through good construction management practices while positive impacts will be further enhanced. Impacts from the proposed projects are classified into intensity, duration and scope. Intensity refers to the level of disruption, duration pertains to the time dimension of impact, while scope refers to the spatial impact. These can be further classified into different levels, as shown in the next table.

**Table 17: Intensity, Duration and Scope Classification of Impacts**

| <b>Intensity: Level of impacts</b>  | <b>Duration: Time dimension of impacts</b>   | <b>Scope: Spatial dimension of the effect</b>                               |
|---|--|---|
| Low: Little change in the characteristics of the component. Difficult to quantify           | Short-lived: Effect dissipates easily  | Regional: Action affects areas outside TTIs                                 |
| Average: Change in certain characteristics of the components. Change may be quantified      | Temporary: Effect does not last. Effect is felt during one project activity or throughout project implementation | Local: Action affects areas within TTIs                                     |
| High: Change in all or in the main characteristics of the component. Change is quantifiable | Permanent: Effect leaves lasting impact for the life of the infrastructure                                       | Limited: Action affects only the innovation center footprint of the project |

95. The three parameters – intensity, duration and scope are incorporated to form multicriteria matrix that can be categorized into the following: Major – effect is permanent that substantially alters the environment quality; Medium – signifies temporary and perceptible effect that has little effect on the environmental component and can be reversed, the effect is only limited and short-lived; and Minor – effect does not affect the environmental component in qualitative or quantitative terms, that is, the effect is short-lived and very limited in scope.

**Table 18: Multi-criteria Analysis to Determine the Potential Environmental Impacts**

| <b>Intensity</b> | <b>Duration<br/>Scope</b> | <b>Short-lived</b> | <b>Temporary</b> | <b>Permanent</b> |
|------------------|---------------------------|--------------------|------------------|------------------|
| Low              | Limited                   | MIN                | MIN              | MED              |
|                  | Local                     | MIN                | MIN              | MED              |
|                  | Regional                  | MIN                | MED              | MED              |
| Medium           | Limited                   | MIN                | MED              | MED              |
|                  | Local                     | MED                | MED              | MAJ              |
|                  | Regional                  | MED                | MAJ              | MAJ              |
| High             | Limited                   | MED                | MAJ              | MAJ              |
|                  | Local                     | MED                | MAJ              | MAJ              |
|                  | Regional                  | MAJ                | MAJ              | MAJ              |

**Table 19: Matrix Showing the Relationship Between VERs and Project Components and Activities for the Construction of Innovation Centers**

| Valued Environmental Receptors               | Project Phases                                   |  |             |                                       |  |                  |  |  |  |  |                       |   |   |                |   |
|--|--|--|-------------|---------------------------------------|--|------------------|--|--|--|--|-----------------------|---|---|----------------|---|
|  | Pre-construction                                 |  |             |                                       |  |                  |  | Construction   |  |  |                       |   |   | Operation      |   |
|  | Location and design of RTIC and other facilities | Consultation and securing of clearances from government agencies | Land survey | Survey of vegetation and tree cutting | Survey of old facilities that will be rehabilitated / replaced, including buildings to be demolished | Traffic planning | Capacity building on safeguards implementation and grievance redress | Site mobilization and construction of temporary facilities - establishment of storage areas for construction materials | Mobilization of construction equipment and perimeter fencing | Management of wastes from demolished buildings | Construction of RTICs | Construction of dormitories and other associated and related facilities | Management of construction activities- worker camps, stockpiles | Demobilization | Operation of RTICs and other facilities |
| Physical Environment                         |  |  |             |                                       |  |                  |  |  |  |  |                       |   |   |                |   |

|   | Occupational health and safety       | Impact on health and safety of workers  | High      | Short-lived | Local    | Medium                                   |
|   | Community health and safety          | Impact on health and safety of community  | High      | Short-lived | Local    | Medium                                   |
| <b>Operation Phase</b>  |                                      |   |           |             |          |  |
| Demobilization  | Land and soil condition              | Compaction of soil  | Low       | Temporary   | Limited  | Minor                                    |
|   | Surface water quality                | Increase in level of pollutants   | Low       | Temporary   | Limited  | Minor                                    |
|   | Air quality                          | Increase level of particulate matter  | Low       | Temporary   | Limited  | Minor                                    |
|   | Ambient noise                        | Increased level of noise  | Low       | Temporary   | Limited  | Minor                                    |
|   | Vehicle traffic                      | Increased level of traffic  | Low       | Temporary   | Limited  | Minor                                    |
|   | Community health and safety          | Impact on the community   | Low       | Temporary   | Limited  | Minor                                    |
| Operation of innovation centers and dormitories   | Climate                              | Climate change impacts  | High      | Permanent   | Regional | Major                                    |
|   | Land                                 | Generation of solid wastes from TVET activities   | Medium    | Temporary   | Local    | Medium                                   |
|   | Surface water quality                | Potential deterioration of water quality  | High      | Temporary   | Regional | Medium                                   |

| Project Components | Environmental Components       | Description of Environmental Effects         | Intensity | Duration  | Scope    | Assessment of Potential Negative Impacts |
|--------------------|--------------------------------|--|-----------|-----------|----------|--|
|                    | Water supply                   | Additional strain to existing water resource | Medium    | Temporary | Local    | Medium                                   |
|                    | Vehicle traffic                | Traffic generation                           | Medium    | Temporary | Local    | Medium                                   |
|                    | Air quality                    | Increase in level of particulate matter      | High      | Temporary | Local    | Medium                                   |
|                    | Receiving body of water        | Deterioration of water quality               | Low       | Temporary | Local    | Minor                                    |
|                    | Ground water                   | Reduced water supply from groundwater        | Medium    | Temporary | Local    | Medium                                   |
|                    | Occupational health and safety | Risks from handling of equipment             | Medium    | Permanent | Regional | Medium                                   |

96. The analysis of impacts shown in the preceding table revealed the following:

- (i) During the pre-construction phase, major risk and potential negative impact include geological, natural and physical hazards, flooding risks and climate change impacts; and medium impacts on biodiversity and loss of trees.
- (ii) During construction, major potential impacts include disturbance of land and soil condition and generation of wastes, including hazardous wastes from buildings to be demolished, and from rehabilitated TTIs and construction of innovation centers, and impact on air quality and noise level; and medium impacts on the following: surface water quality, loss of vegetation, reduced water supply from ground water, temporary disturbance of access, increased level of use of water, increased level of vehicle traffic, and health and safety of workers and the community.
- (iii) During operation, major impacts include climate change while medium for generation of solid wastes from TVET activities, potential deterioration of water quality, additional strain to existing water resource, traffic generation, increase in level of particulate matter, deterioration of water quality, reduced water supply from groundwater, and risks of students and workers from handling equipment.

## D. Negative Impacts and Mitigation

### 1. Pre-construction Phase

97. The construction of innovation centers and rehabilitation of TTIs will be done exclusively at the selected TTI sites. Impacts due to project location include geological hazards such as earthquake and volcanoes, vulnerability to tropical cyclones and flooding, and proximity to areas with high biodiversity, and loss of trees. As some buildings will be demolished in NCR, CAR, Region I, Region II and Region III, and some TTIs will be rehabilitated or expanded, there is a potential that hazardous wastes including asbestos or asbestos-containing materials (ACM) are present in buildings affected. The design of buildings, facilities and other associated infrastructure necessary for the construction and operation of RTICs and other facilities will be evaluated further during detailed design stage.

98. The following are the major environmental issues associated with project location.

#### a. Geological Hazards

99. **Earthquake Hazards.** In terms of earthquake hazards, Regions II, VIII, X, XI, XII, and BARMM are all classified as High (Global Facility for Disaster

Reduction and Recovery, 2020). The project will conduct geotechnical survey during detailed design to further evaluate the hazards from active faults close to the TTIs that may trigger earthquakes. The project will also be in compliance with the National Structural Code of the Philippines and other applicable codes, standards and regulations.

100. **Volcanoes.** Mt. Parker, which is 30.72 km from General Santos National School of Arts and Trade. Volcano hazards associated with eruption include lava flow, ash fall, pyroclastic flow, lateral blast and volcanic gas. The project will utilize the Volcano Information Materials from PHIVOLCS to educate the TTI stakeholders on the needed actions to prepare for volcanic eruptions.

#### **b. Natural Hazards**

101. **Tropical Cyclones.** Region II was the most affected, with 81-106 TCs from 1953-2010, while VIII received about 61-80 TCs for the same period. The design of innovation centers will take into consideration the impacts of severe tropical cyclones.

102. **Flooding.** The TTIs most at risk for flooding include RTC Tuguegarao and RTC Tagoloan where flooding may reach up to 1.5 meters during a 5-year return period. The design of innovation centers and other facilities will consider flooding risks and incorporating mitigating measures such as raising the floor height of buildings and increasing capacity of drainage.

103. **Vulnerability to climate change.** Increased temperature in the TTIs may lead to decreased ground water supply for innovation centers, increased need for ventilation and additional energy for air conditioning. The projected rainfall reduction over central sections of Mindanao, will likewise impact on TTI's water supply. The high variability in the frequency of occurrence and intensity of tropical cyclones will impact on the integrity of the buildings, specifically in Region II, and VIII. The projected sea level rise of 20 cm by the end of the 21<sup>st</sup> century will likewise impact TTIs located near coastal areas, as this will worsen storm surge hazards in these areas.

104. **Impacts on biodiversity.** The construction of innovation centers and other facilities will not lead to loss of biodiversity or critical habitat since all activities will only be confined within TESDA sites. To coordinate with the Department of Environment and Natural Resources and Ministry of Environment, Natural Resources and Energy (MENRE) regional office to ensure compliance with local environmental requirements.

105. **Loss of trees.** Based on the initial survey from selected sites, trees will be affected in the following regions, arising from the construction of RTICs: II, VIII, XII, CAR and BARMM.

TTIs will coordinate with the Community Environment and Natural Resources Office (CENRO) with jurisdiction over the TTI, on requirements and mitigating measures (including replacement of cut trees) to lessen impacts of cut vegetation.

### c. Physical Hazard

106. **Hazardous wastes from buildings to be demolished or rehabilitated.** There is a potential that hazardous wastes, including asbestos, are present in buildings affected. To ensure compliance with relevant regulations, the Project will refer to DENR Administrative Order (DAO) No. 2000 – 02 (Chemical Control Order for Asbestos), particularly Section IX, Specific Requirements and Standards, item 6 – Renovation, Removal and Demolition Requirements. Based on the DAO, the duly authorized owner or operator, in this case the TTI, through the Design and Construction Supervision Consulting (DSC) Firm, shall thoroughly inspect and assess the facility to verify the presence of any friable asbestos containing materials, or non-friable asbestos containing materials that have become friable prior to the commencement of any demolition activity.<sup>11</sup> In addition, and based on the findings of the risk assessment, the DSC Firm will also develop a risk management plan to be refined and implemented by works contractors during the construction phase.

## 2. Construction Phase

107. **Disturbance of land and soil condition.** The construction of innovation centers will only be done in the land allocated by TTIs. There will be no land acquisition and resettlement as these lots are owned by TTIs.

108. Construction phase activities include mobilization of construction equipment, construction of temporary facilities, and construction of innovation centers and other facilities. Prior to the construction of innovation centers, contractors will transport construction materials and equipment that will disturb soil condition within the project area. The impact will be permanent since the area traversed will be used for internal road, parking and buildings. Impacts will be limited to the building footprint area and areas devoted for roads and parking. At the minimum, about 1,900 to 2,500 m<sup>2</sup> of land will be altered permanently since these are the areas required for the building.

109. To mitigate the impacts on disturbance of land and soil condition, best management practices include limiting the amount of erosion and sediment by disturbing only the areas necessary for construction, phasing of construction activity, lessening the grade of steep slopes, and covering of exposed soils until time of revegetation or building of facilities. Soil loss can also be lessened by scheduling construction activities during fair weather to prevent soil erosion, use of appropriate sedimentation and soil erosion and control devices (sediment traps or silt fences). Stockpiles of soil removed during construction should be covered. Storage of construction materials should be limited to paved parking lots or inactive areas within existing building or temporary shed. Construction machineries should be parked in paved areas. Drivers should also be instructed to observe speed limit to reduce soil disturbance.

---

<sup>11</sup> Friable asbestos material" means any material containing more than one percent (1%) asbestos, as determined using standard polarized light microscopy techniques, which when dry can be crumbled, pulverized, or reduced to powder by hand pressure thereby, releasing airborne fibers. "Non-friable asbestos containing material", on the other hand, means any material containing more than one percent (1%) asbestos, as determined by using standard polarized light micro- copy techniques, which when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure (DENR Administrative Order 2000 – 02).

110. **Generation of wastes.** The rehabilitation of TTIs and construction of innovation centers will generate wastes from cut trees, spoil, demolition and construction wastes that can negatively impact the environment, workers, students and faculty of TTIs, and people close to TTIs. Prior to construction of innovation centers, vegetation will be cut and land will be cleared. These will generate wastes from cut trunks, leaves and roots that may contaminate receiving body of water. Permit to cut trees will be coordinated with DENR CENRO while the disposal of organic materials will be coordinated with the local government.

111. Rehabilitation of TTIs will also generate demolition wastes that may include general wastes and hazardous wastes. The works contractor must implement a waste management plan as part of CEMP, and in case asbestos is identified as being present in those areas of buildings to be demolished or rehabilitated (to be identified during detailed engineering design), the contractor must implement the risk management plan developed by DSC Firm. The contractor must ensure to set-up waste collection area for construction, non-hazardous and domestic solid wastes. Solid wastes must be segregated into biodegradable, recyclable, residual and hazardous wastes. Construction wastes, consisting of concrete and rubble, steel rods, damaged formworks and paper that can be recycled must be separated. Hazardous wastes such as paint, used oil and fuel, and batteries, must be disposed temporarily in designated hazardous waste temporary storage, prior to collection by DENR accredited hazardous waste management provider, for proper treatment, storage and disposal. The contractor will ensure compliance with national regulations, international commitments where Philippines is a party, and WB - IFC EHS Guidelines (2007) on hazardous waste storage, transportation and treatment and disposal. Hazardous wastes generated during construction, which include fuel and chemicals, among others, should be stored to prevent or control accidental releases to air, soil and water resources. Stored waste should have physical separation or containment curbs, and should be stored in closed containers away from direct sunlight, wind and rain. There should be adequate ventilation where volatile wastes are stored.

112. **Impact on air quality and noise level.** There will also be impacts on air quality and increased level of noise arising from movement of construction vehicles, demolition of buildings in some TTIs, and the construction activities itself. The quality of receiving body of water will also be affected, as disturbed land will generate runoff during rainfall events.

113. The movement of vehicles carrying construction materials may generate dust that may affect the air quality in surrounding areas and may also impact the health of the people. The contractor must require covering trucks carrying construction materials to prevent dispersion of dust during transport. Piles of aggregates must also be covered during high wind condition to prevent dust from scattering in TTI vicinity. Washing of tires of construction vehicles will also be imposed after delivery of construction materials. Speed limit and watering of roads will also be implemented to prevent dust.

114. Workers exposed to high noise levels (i.e., 90 dBA) may suffer from physical and psychological stress, reduced productivity, interference with communication and concentration, and may contribute to workplace accidents and injuries due to difficulty in hearing warning signals.<sup>12</sup> Workers who are exposed to repeated exposures to high levels of vibration may suffer from hand-arm and whole-body vibration. Hand-arm vibration exposure, is a known contributing

---

<sup>12</sup> United States Department of Labor. [Occupational Noise Exposure](#) (accessed 13 May 2020).

factor to carpal tunnel syndrome and other ergonomic-related injuries. It also causes direct injury to the fingers and hand that affect feeling, dexterity and grip.<sup>13</sup>

115. To mitigate excessive noise, no worker should be exposed to a noise level greater than 85 dB(A) for a duration of more than 8 hours per day without hearing protection. In addition, no unprotected ear should be exposed to a peak sound pressure level (instantaneous) of more than 140 dB(C). The use of hearing protection should be enforced actively when the equivalent sound level over 8 hours reaches 85 dB(A), the peak sound levels reach 140 dB(C), or the average maximum sound level reaches 110dB(A). Impact of vibration can be lessened through choice of equipment, installation of vibration dampening pads or devices, and limiting the duration of exposure. Electric hazard from exposed or faulty electrical device can be mitigated by such measure as marking all energized electrical devices and lines with warning signs and protecting power cords and extension cords against damage from traffic by shielding or suspending above traffic areas.

116. **Impact on surface water quality.** The contractor will ensure that the wheels of vehicles transporting aggregates and other construction materials are thoroughly washed to prevent sediment runoff that will impact the quality of receiving body of water. Portable toilets will be provided to manage the wastewater coming from the workers. Contractor through third party service provider, will be responsible for the operation, maintenance and disposal and treatment of collected wastes from portable toilets. Potential impacts on receiving body of water will be addressed through minimization of exposed soil from erosion, construction of silt traps, interceptor drains and sedimentation pits around work areas and camp site.

117. Construction of innovation centers will generate construction wastewater as well as domestic wastewater from workers who will temporarily stay inside workers' camp. It was estimated that around half of workers will stay inside the construction camp. It was estimated that water consumption for each worker is 80 liters/day or a total of 1.92 m<sup>3</sup>/day. Sources of water consumption will come from toilets, housing, dining area, laundry and kitchen. It was also estimated that 80%, or 1.5 m<sup>3</sup>/day will drain into receiving body of water of each TTI. This volume of wastewater will have high level of BOD<sub>5</sub>, nutrients, bacteria and pathogen. This will further contribute to local water pollution if not treated. The impacts on waterways can be mitigated through appropriate collection and treatment.

118. **Impact on vegetation.** As there are trees in some TTIs where innovation centers will be constructed, there will be medium impact on trees as these need to be cut or transplanted in available land within the TTI. A permit to cut will be secured from the CENRO prior to cutting or transplanting of trees. The contractor will schedule the cutting of trees progressively so as not to expose soil for long period. Contractor will be responsible for transport and disposal of biomass wastes from cut trees. Contractor also need to strip the topsoil from any areas to be covered by pavement, structures or where utilities will be located, to be used later for revegetation. Stripping of topsoil shall be at a depth to the bottom of the grassroots zones. Grass shall be stripped together with topsoil.

119. **Impact on water supply.** Since construction will involve the use of water, there will be medium impact on the water supply of TTIs, which is sourced from the community water supply and groundwater supply of TTIs. Water supply will be used for construction activities and for workers' use in construction camp.

---

<sup>13</sup> R. Brauch. 2015. [Vibration Hazards in the Workplace: The Basics of Risk Assessment](#). *Occupational Health and Safety*.

120. **Impact on vehicle traffic.** There will be increased vehicle movements during construction phase, which may affect localized traffic. There may also be restriction of access in other buildings resulting from the construction of TTI facilities. The contractor will prepare and implement traffic management plan as part of the Contractor's EMP, in coordination with the Traffic Management Office of the city or municipality covering the TTI, to manage the traffic in the area. The plan will include driving policy, roles and responsibilities of drivers, workers and management, traffic management procedures, site layout and traffic flow pattern and schedule, road safety rules, training and vehicle inspection registries, road safety records and incident reports, and performance reports. The contractor must set speed limit for all construction vehicles and install traffic warning signs within the project site. The contractor must also conduct regular orientation and capacity building on safe driving for drivers and workers. Contractor must also be responsible for regular vehicle maintenance. Warning and informatory signs will also be put up along the roads leading to the construction site. There will be prior consultation and coordination with the local governments and affected stakeholders prior to start of construction.

121. **Impact on health and safety.** To minimize the short-term construction impacts on health and safety of workers, students, TESDA personnel, and the community, good construction management practices will be implemented in the select TTIs. The Environmental Management Plan (EMP) for the project, includes mitigation measures to prevent or minimize above construction impacts. The Contractor will also prepare and implement occupational health and safety plan as part of the CEMP, format of which is based from Section 2.0 of World Bank – IFC EHS Guidelines on Occupational Health and Safety.<sup>14</sup> The contractor will implement as well the asbestos risk management plan developed by DSC Firm, as applicable. The project will adhere to the relevant provisions of the Environmental, Health and Safety General Guidelines of the World Bank Group (2007) and the relevant environmental regulations of the Philippines. The EMP includes mitigation measures on environment (air emissions and ambient air quality, wastewater and ambient water quality, water conservation, hazardous materials management, waste management and noise); occupational health and safety; community health and safety; and construction and decommissioning. The bidding documents and contracts for civil works will include the EMP.

122. Contractor shall require workers with high exposure to hazards to wear personal protective equipment (PPE) such as face and eye protection device with side shields, welder goggles for welding and hot works, gloves, facemasks with appropriate filters for dust removal, plastic helmets with top and side protection, body suits, and safety shoes and boots. Contractor must also implement fall prevention and protection measures for workers exposed to falling hazard. These include installation of guard rails, proper use of ladders and scaffolds, and use of fall prevention devices such as safety belt. The Contractor should also provide first aid attendant for the project as well as medical kit to treat workers' injuries and illnesses prior to transportation to hospital.

123. The contractor must also restrict the access of students and other personnel of TTIs, and the general public to the site as the construction poses health and safety hazards. These include accidents associated with building structure failure, injuries from falls, open excavation or contact with heavy equipment, respiratory problems from dust and fumes, elevated noise from construction equipment, and exposure to hazardous materials. To lessen the impact of the project on the community's health and safety, the contractor must fence the perimeter of the construction site, install signages, assign guards at entrance and exit, and inform the public through regular

---

<sup>14</sup> International Finance Corporation. [Environmental, Health, and Safety \(EHS\) Guidelines—General EHS Guidelines: Occupational Health and Safety](#).

consultation. The contractor must also ensure that there are no hazardous conditions inside the project site such as open excavation and unstable piles.

### 3. Operation Phase

124. **Impact of climate change.** Based on the analysis of climate baseline conditions and future climate change scenario, the project will be affected by El Niño-induced drought and rainfall change.

**Table 21: Potential Climate Change Impacts and Proposed Adaptation Measures**

| Climate Change Indicator | Affected Provinces                                  | Potential Climate Change Impacts   | Proposed Adaptation Measures  |
|--------------------------|---|--|---|
| Niño – induced drought   | Sultan Kudarat, Misamis Oriental                    | Decrease in both community and groundwater supply, affecting the operation of TTIs | Rainwater harvesting measures to supplement existing water supply, specifically in TTIs that depend on ground water supply  |
|                          |   | Increase in demand for power supply for air conditioning                           | Utilize solar PV panels to complement the power supply from the grid.<br><br>Design incorporating natural ventilation or use of fans instead of air conditioners in some sections of RTICs and rehabilitated TTIs.<br><br>Possible use of skylight roofing to utilize natural light, and to lessen localized temperature. |
|                          |   | Impact on long-term viability of agri-fisheries related programs of TTIs           | Introducing drought tolerant variety of crops, use of water-smart technologies such as drip irrigation and wastewater reuse, and adopting conservation agriculture technologies   |
| Rainfall change          | Leyte, Misamis Oriental and Sultan Kudarat, Cagayan | Flooding   | Increase in elevation of building above High Flood Level<br><br>Increase in capacity of drainage<br><br>Provision of permeable pavement for parking spaces to recharge groundwater supply   |
| Sea level rise           | Leyte, Zamboanga del Sur                            | Flooding, saltwater intrusion, increased level of storm surge                      | Increase in elevation of building above High Flood Level<br><br>Developing additional water supply in view of salt water intrusion on groundwater supply<br><br>Design to minimize impact caused by storm surge   |

125. **Generation of wastes.** The operation of TTIs and RTICs will generate wastes from students and faculty. The National Solid Waste Management Commission of the DENR estimated that the per capita waste generation for the Philippines is 0.4 kg/day. These include biodegradable from food consumed and papers, recyclables such as bottled water and soft drinks, and wastes generated from TESDA programs (e.g., wastes from metal works, used oil and fuel, batteries, etc.).

126. The Project will abide by the guidelines of Ecological Solid Waste Management Act of 2000 (Republic Act 9003) and the Toxic Substances and Hazardous and Nuclear Wastes Control

Act of 1990 (Republic Act 6969). The former regulates general wastes, while the latter regulates toxic and hazardous wastes.

127. To manage general, non-hazardous wastes, the management must install 3 types of solid waste containers in designated areas with the following labels: biodegradable or organic (food waste, kitchen waste, paper), recyclable (plastics, glasses and metals), and residuals. All domestic wastes must be collected, segregated, and transported to common solid waste management facility of each TTI. The collected wastes will be transported through the municipal or city solid wastes management services or through a service provider that will transport the collected solid wastes to materials recovery facility and at the disposal facility of the municipality or city. Hazardous waste management, such as those coming from laboratories, vocational courses related activities, and maintenance activities, will be governed by relevant provisions of RA 6969.

128. Within the project site, each TTI must designate a specific storage zone for hazardous waste. The facility should be lined, with enclosed walls and roofs to store hazardous waste containers. The management should actively promote waste segregation to avoid hazardous waste mixing with general wastes. The management must also initiate regular training on safe practices to handle hazardous wastes. These hazardous wastes include used oil, battery, electric and electronic wastes, pesticides, and paints and other chemicals. Appropriate PPEs will also be required for the workers.

129. **Potential deterioration of water quality.** Wastewater from cleaning of equipment, used oil from vehicles and equipment, kitchen wastes, and other sources may contaminate the receiving body of water of the TTI. To mitigate the potential deterioration of water quality of receiving body of water, each innovation center will install a wastewater treatment system that will meet the effluent standard for water following the Philippine Clean Water Act of 2004 and WB-IFC EHS Guidelines.

130. Additional strain to existing water resource. The operation of innovation center and rehabilitated TTIs will increase additional demand to existing water resource of TTIs. In addition, there will be additional power arising from the usage of additional facilities and equipment. Each TTI will explore options to utilize solar power to complement power from the grid. Each TTI will explore rainwater harvesting for plant irrigation and for general use, except for drinking. Each TTI will also explore the potential of reusing the effluent for flushing toilets, design of which will be finalized in detailed engineering design phase.

## **E. Analysis of Alternatives**

131. Alternative locations for innovation centers were discussed during the February consultations with safeguards focals of each TTI. ADB consultant also consulted with each TTI to discuss the area allocation and the most suitable site for the TTI. The Site Development Plans (**APPENDIX 1**) for the select TTIs are the most suitable locations for each TTI, based on the preliminary evaluation and consultations with the TTI.

## **VI. INFORMATION DISCLOSURE, CONSULTATION AND PARTICIPATION**

### **A. Information Disclosure**

132. In line with the Access to Information Policy of ADB (2018), the IEE report for the project will be made available in a timely manner, in an accessible place, and in a form and language

that will be understood by affected people and other stakeholders. The purpose is for affected people, including the general public, to provide meaningful inputs into project design and implementation. As this version of the IEE is based on the conceptual design, updated IEE reflecting detailed engineering design, which incorporates further inputs and feedbacks of all concerned stakeholders, will also be made available to the public.

133. ADB will disclose the following safeguard documents on its website: final or updated initial environmental examination upon receipt; and environmental monitoring reports submitted by TESDA during project implementation upon receipt.

## **B. Key Stakeholder Consultation and Participation to Date**

134. ADB's SPS (2009) requires project proponents to carry out meaningful public consultation that begins early and is carried out throughout the project cycle and to provide timely disclosure of relevant information that affected people can understand and can be easily accessed. Moreover, SPS also requires that consultations be free from coercion, be gender inclusive and caters to the needs of disadvantaged and vulnerable people, and that all relevant views of affected people are considered.

135. The consultations aimed to familiarize and build capacity of safeguards focals on ADB's SPS (2009) and the Philippine environmental impact assessment requirements for the TTIs. These consultations also allowed safeguards focals to present the baseline conditions of proposed sites for innovation centers and other facilities. The infrastructure survey and safeguards information that were previously submitted by the TTIs were also discussed to confirm the information indicated in the forms. Lastly, responsibilities on environmental monitoring, establishment of grievance redress mechanism within TTI, and securing of various permits and clearances at each stage of the project from relevant government agencies were also discussed. Below is the program for the consultation.

## **C. Future Public Consultation and Information Disclosure**

136. All key stakeholders should be informed about the project and their inputs solicited. Activities for information disclosure, public consultation and public participation are part of the overall planning design process and construction of the proposed TTIs. Information of planned project activities prior to construction works will be done through stakeholder consultations and publications through mass media and posters. Stakeholder consultations will be done through:

137. **Discussions with stakeholders.** It aim to explain the construction activities of TTIs, including the environmental and social impacts associated with the activities and the management plan to address potential impacts. Stakeholders, which include students, staff of TTIs, and the communities that will be affected by the project, may express their opinions verbally during these discussions.

138. **Survey.** Stakeholders that will be affected by the project will fill out their responses in the questionnaire prepared by TESDA / TTIs. The stakeholders will also provide written opinions and suggestions on the project in the prepared questionnaire as well as their suggestions on managing potential environmental and social impacts of the project.

## **VII. GRIEVANCE REDRESS MECHANISM**

### **A. Grievance Redress Mechanism**

139. ADB's SPS (2009) requires the borrower to establish a GRM to receive and facilitate the resolution of environment-related issues and concerns affecting the project. A project-specific grievance redress mechanism will be established in each TTI, to receive, evaluate and facilitate the complaints / grievances of affected persons on the environmental performance of the established facilities.

140. The PMU will establish and maintain a grievance redress mechanism to register, assess, and address project-related complaints. The selected TTIs will assign GRM focals prior to commencement of works to address the issues raised by affected people on the project. Contact number of the contactor, the TTI safeguards focals, the PMU and the DSC including names, positions, and telephone numbers shall be disclosed at the project site.

141. Persons or groups with project related issues may file their complaints with the GRM focals through the grievance intake form or through email or complaints box that will be made available in each TTI. The TESDA GRM focal at the regional office will be responsible for the registration of grievances and communication with aggrieved party.

142. The steps to be followed in filing complaints and the procedures for redress during construction phase are the following:

- (i) Complainant will provide the background and file the complaint verbally or in writing to TTI. The GRM focal will assist the complainant in filling-up the grievance intake form;
- (ii) Within 2 working days, TTI, the contractor's representative, and the complainant will discuss if the complaint can be resolved without calling for a meeting;
- (iii) Within 3 days of lodging the complaint, TTI will provide the complainant a written feedback on the process, steps and timeframe for resolving the complaint.
- (iv) If the complaint cannot be resolved, a meeting with the complainant will be called within 5 working days;
- (v) The TTI will have 15 working days to resolve the complaint;
- (vi) The complainant will receive feedback from TTI within 5 working days after the various steps of the GRM are completed; and
- (vii) If the complainant is not satisfied with the feedback from the TTI, the complainant will elevate the complaint to TESDA Central Office following the above process. If the complainant is still not satisfied with the outcome, he or she or the group has the option to access the Government's judicial, administrative remedies or through concerned government agencies.

143. The steps to be followed during operation will be the same, except that the contractor's representative will no longer be involved.

144. The GRM focal will receive, follow-up and prepare monthly reports regarding all complaints, disputes or questions received about the Project and corresponding actions taken to resolve the issues. These reports will be included in the semi-annual environmental monitoring reports to be submitted by TESDA to ADB.

## **B. ADB's Accountability Mechanism**

145. In case issues are not resolved through the GRM, affected persons may elevate their complaint to Philippine ADB Resident Mission. The complainant can elevate the case further through the ADB's accountability mechanism in case issues are not resolved through the GRM and ADB Resident Mission. The accountability mechanism provides opportunities for people that are adversely affected by ADB-financed projects to express their grievances, seek solutions, and report alleged violations of ADB's operational policies and procedures, including safeguard policies. ADB's accountability mechanism comprises of (i) consultation led by ADB's special project facilitator to assist people adversely affected by ADB-assisted projects in finding solutions to their concerns and (ii) providing a process through which those affected by projects can file requests for compliance review by ADB's Compliance Review Panel.

# **VII. ENVIRONMENTAL MANAGEMENT PLAN**

## **A. Overview**

146. The EMP has been prepared to provide the mitigating and management measures that will be undertaken for identified impacts at different phases of the project. Information includes: (i) Mitigating measures to be implemented (ii) required monitoring associated with the mitigating measures and (iii) implementation arrangement. Institutional set-up is presented in the implementation arrangement and discusses the monitoring and supervisory roles of responsible parties.

147. The EMP contains a number of components crucial to effective environmental management within the Project. These include:

- (i) Evaluate the performance of mitigation measures proposed in IEE;
- (ii) Provide information which could be used to verify predicted impacts and thus validate impact prediction techniques;
- (iii) Suggest improvement in environmental mitigation measures as required; and
- (iv) Provide information on unanticipated adverse impacts or sudden change in impact trends.

148. The EMP has been developed based on discussions with NITESD-TESDA and the online consultations with safeguards focals of the selected TTIs. The EMP will be included in the bid and contract documents to ensure that contractors are aware of their obligations during construction phase. The plan will also guide TESDA in the supervision and monitoring of contractors' safeguards performance during construction.

## B. Mitigation Plan

149. Environmental mitigation measures of the project have been formulated and summarized in Table 27. It presents summary information on: (i) project activity causing impacts by project's phase; (ii) Anticipated impacts associated with project activity; (iii) proposed mitigation measures for each environmental impact, (iv) responsible party for carrying out mitigation measures, and (v) associated cost (tentative). Details of mitigating measures are already discussed in Chapter V where the need for mitigation of each impact was determined in the screening process. The table also presents the information on Impact Monitoring including: (i) parameters to be monitored; (ii) frequency and means of verification; (iii) party responsible for monitoring.

150. During the pre-construction phase the cost of preparing tender documents with provisions for the required environmental measures are part of the design consultant's contract. During construction, all costs of environmental mitigation measures shall be the responsibility of contractors and are considered part of their contracts as specified in the technical specifications. During the operation phase, all costs of mitigation measures are part of the operation and maintenance costs of TTIs.

151. The EMP costs shall not be taken as separate environmental costs since they are already part of specific items such as the design consultant's contract, contractors' contracts and TTI's operation and maintenance costs.

## C. Reporting

152. Throughout the construction period, each contractor will submit monthly works progress and CEMP implementation reports to the DSC. The quarterly project progress reports prepared by the PMU for ADB should include a short summary of EMP implementation progress and any grievances raised/resolved in the reporting period. The PMC will support the PMU in preparing and submit semi-annual environmental monitoring reports (SAEMRs) to TVET and ADB.<sup>15</sup> The SAEMR will include progress of construction, results of site inspections and environmental monitoring, progress made in EMP implementation, status of compliance with domestic environmental regulatory requirements and other clearances, record of community complaints, unforeseen environmental impacts, and suggested corrective actions for the next monitoring period. The SAEMRs submitted to ADB until the Project Completion Report is prepared. The SAEMR shall be based on the semi-annual environment monitoring reports to be prepared by the TTIs (on behalf of the PIUs). Table below presents the environment safeguards reporting plan for the project.

**Table 24: Environmental Safeguards Reporting Plan**

| Type of Report                  | Basic Content  | Prepared by | Submitted to   | Frequency          |
|---------------------------------|--|-------------|----------------|--------------------|
| <b>Construction Phase</b>       |  |             |                |                    |
| Construction Progress Report    | Progress of construction, CEMP implementation (checklists)                             | Contractors | TTIs, DSC, PMC | Weekly and Monthly |
| TTI Environment Progress Report | Environment progress reports, including environment supervision results, accidents and | TTIs, DSC   | PMU, PMC       | Semi-annual        |

<sup>15</sup> Report template is annexed to the IEE.

| Type of Report                  | Basic Content  | Prepared by | Submitted to | Frequency             |
|---------------------------------|--|-------------|--------------|-----------------------|
|                                 | incidents, and any complaints received   |             |              |                       |
| Project Progress report         | Project status Including a summary section on EMP implementation, accidents and incidents, and any complaints received   | PMU, PMC    | ADB          | Quarterly             |
| Environmental Monitoring Report | EMP implementation, environmental monitoring, compliance with GOI environmental requirements, accidents/incidents, complaints received, and actions undertaken | PMU, PMC    | ADB, TVET    | Semi-annual           |
| <b>Operational Phase</b>        |  |             |              |                       |
| Report to ADB                   | Subproject progress report, including section on EMP implementation and monitoring   | PMU, PMC    | ADB          | Semi-annual until PCR |

ADB = Asian Development Bank; CEMP = contractor environmental management plan; EMP = environmental management plan; PCR = project completion report; PIU = project implementation unit; PMC = project management consultant; DSC = design and construction supervision consultant; PMU = project management unit.

#### **D. Institutional Arrangement**

153. The Department of Finance is the Executing Agency (EA) and TESDA is the Implementing Agency (IA) for the project. The DOF, who will sign the Loan Agreement on behalf of the Philippine government, will be responsible for overall oversight, strategic and policy direction of the project. TESDA, as the implementing agency, will be responsible for implementing the project. It will be accountable for the use of the ADB loan proceeds and for preparing project financial reports. TESDA will also ensure that the project complies with the ADB SPS, the IEE and EMP, and the PEIS System. The Project Management Unit (PMU) to be established for the project will include safeguard specialists who will be supported by a Project Management Consultant (PMC) and Design and Construction Supervision Consultant (DSC), each with safeguards consultants. Each TTI will assign one safeguards focal for EMP implementation supervision. The PMC, on behalf of the TESDA and the PMU, will update the IEE and EMP during detailed engineering design stage. The tendering process shall advocate environmentally responsible procurement by ensuring the inclusion of EMP provisions in the bidding documents and construction contracts. TTIs are tasked to (i) secure required government environmental approvals such as CNC or ECC prior to project implementation; (ii) establish and operationalize the grievance receipt and administration mechanisms at the TTI level, in line with the overall project level grievance redress mechanism; (iii) conduct consultations with internal and external stakeholders; and (iv) provide inputs to DSC on TTI's compliance to ADB's and Philippine's safeguards requirements for submission to PMU, which, through the PMC, will be responsible for consolidating all the reports from TTIs into one consolidated semi-annual safeguards monitoring report.

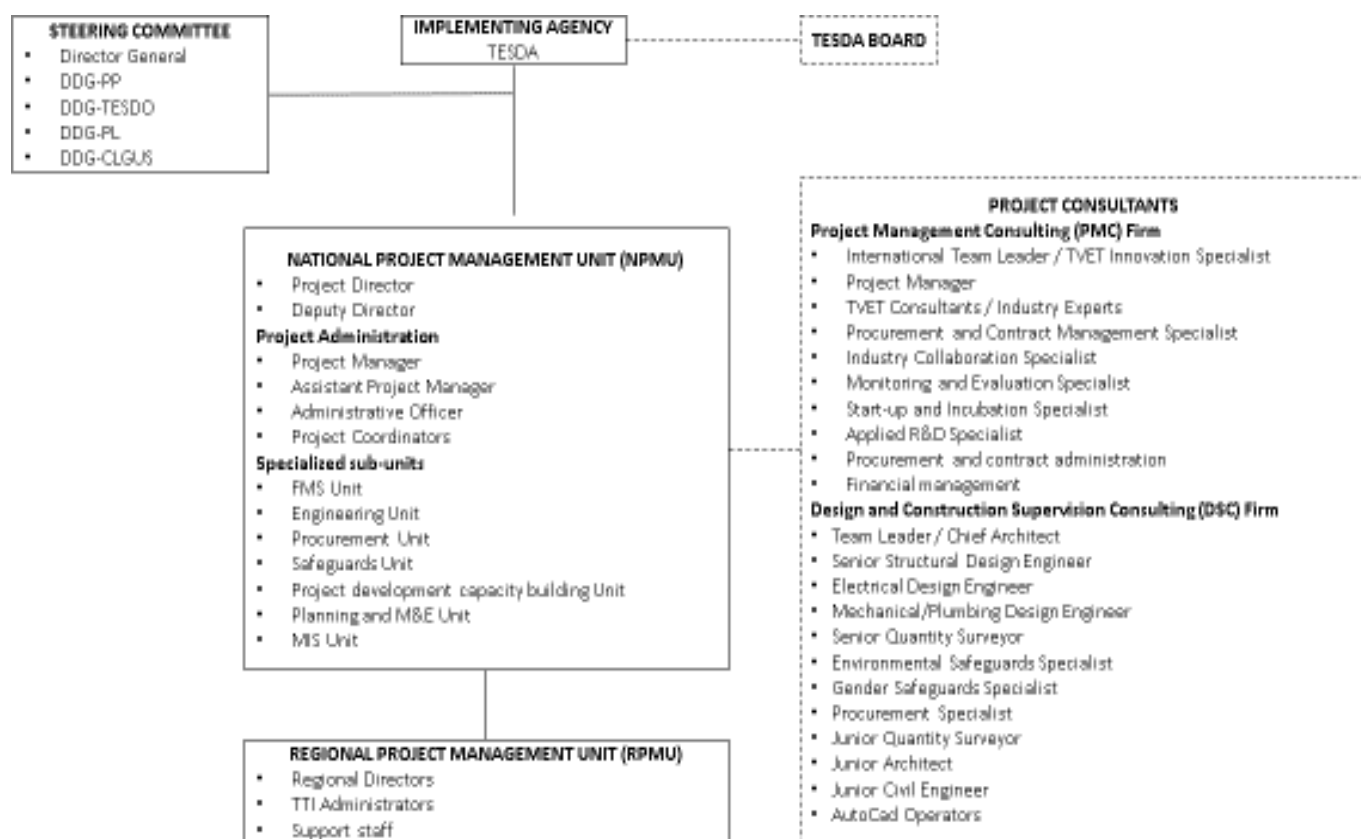

154. Works contractors will assign qualified EHS staff at each construction site to supervise and monitor the EMP and ensure compliance with safeguards requirements of ADB and the

Government of the Philippines. Contractors will be required to prepare and submit their CEMP prior to commencement of works, to be cleared by the DSC.<sup>16</sup>

155. Training and/or workshops on environmental management and monitoring requirements shall be programmed by the PMC for PMU, safeguard focals at TTIs, Contractors and other relevant parties. Monitoring of occupational and community health and safety requirements, including COVID-19 risk management, will be prioritized during construction to reduce risks to workers and the community. PMU and safeguard focals at TTIs shall continue the process of public consultation and information disclosure in accordance with the requirements of the SPS and the government rules and regulations during detailed engineering design and construction phases.

156. The Contractor must adhere to the mitigating measures and other requirements in the EMP to ensure that construction will not adversely affect the environment, the community and workers. During operation phase, each regional TTI will be responsible for implementing environmental management measures specified in the EMP. These include management of wastes from activities arising from the courses to be offered and innovations to be introduced in rehabilitated TTI facilities and innovation centers, respectively. These also include other management measures, as detailed in the EMP of the IEE.

**Figure 13: Project Management Organization**

<sup>16</sup> The CEMP shall include but not necessarily be limited to the following sub-plans: workers' accommodation plan, occupational health and safety plan, emergency response plan, traffic management plan, waste disposal management plan, and demobilization plan.

**Table 25: Institutional Arrangement**

| <b>Responsible Unit</b>                                   | <b>Roles and Responsibilities</b>  |
|---|--|
| ADB   | <ul style="list-style-type: none"> <li>• Provide financing, monitor implementation and undertake review missions</li> <li>• Approve procurement activities</li> <li>• Review project implementation twice a year</li> <li>• Disburse grant proceeds to the consultants and the contractors for the project</li> </ul>  |
| TESDA Board   | <ul style="list-style-type: none"> <li>• Advises the PMO on general policy directions for the project, including ensuring synergy of programs across TVET stakeholder agencies</li> </ul>  |
| Steering Committee  | <ul style="list-style-type: none"> <li>• Provides overall direction and oversight function to the PMU; and</li> <li>• Makes decisions on matters critical to the implementation of the project</li> </ul>  |
| Project Management Unit (NPMU)                            | <ul style="list-style-type: none"> <li>• Responsible for the overall day-to-day operations of the PMO</li> <li>• Liaise with ADB and relevant NGAs and LGUs to ensure compliance with processes and requirements needed in the implementation of the project</li> <li>• Coordinate with relevant NGAs (DTI, DOST, etc.) to ensure project components and outputs are in sync with Philippine development priorities and action plans;</li> <li>• Coordinate with different project stakeholders;</li> <li>• Coordinate / call on other TESDA offices or organizes technical working groups (TWG) to provide or produce administrative, logistical, technical, financial, and other relevant information and data needed for the project;</li> <li>• Ensure compliance with all applicable laws in the implementation of the project;</li> <li>• Provide guidance and ensure seamless communication and coordination between and among the PMU and the Project Consultants;</li> <li>• Undertake project procurement activities (goods, works and consultancy services) in accordance with the Loan Agreement and ADB Procedures;</li> <li>• Handle project financial managements activities in accordance with ADB Procedures;</li> <li>• Facilitate quarterly, special administrative and midterm reviews of the project;</li> <li>• Prepare and submit regular project implementation reports;</li> <li>• Manage contract administration and negotiations requirement;</li> <li>• Provide regular updates to the Oversight Committee and TESDA Board, as needed;</li> <li>• Elevate critical decision points regarding the project to the Oversight Committee</li> </ul> |
| Project Management Consulting (PMC) Firm                  | The Firm will ensure that the project management, monitoring and support requirements for the project and the delivery of project outputs will be implemented in compliance with the ADB's Policies and Regulations, Loan Agreement, Project Agreement, project administration manual (PAM), procurement plan, and the GOP's national laws.  |
| Design and Construction Supervision Consulting (DSC) Firm | The Firm will work closely with and assist the PMU in the finalization and approvals of all design work needed for the new construction of selected 16 RTICs and the repair and upgrading of selected TTIs. The Firm will be responsible for the timely completion of the detailed architectural and engineering designs (architectural, structural, electrical, mechanical, plumbing designs) for new construction and repair. The Firm will also conduct asbestos risk assessment for the buildings (or parts thereof) to be rehabilitated or demolished, and to develop an asbestos risk management plan should asbestos be identified.   |
| Contractor  | Each Contractor will be required to hold a valid Philippine Contractors Accreditation Board license and will appoint a qualified Environment, Health and Safety (EHS) officer to supervise construction works in compliance with the EMP and the Philippine regulatory and policy framework for EHS.   |

## **E. Environmental Management Plan**

157. The EMP for the project includes the proposed mitigation measures, environmental monitoring and reporting requirements, related institutional or organizational arrangements, capacity development and training measures, implementation schedule, cost estimates and performance indicators. The Contractor must adhere to the mitigating measures and other requirements in the EMP to ensure that construction will not adversely affect the environment, the community and workers. In addition, the Contractor will prepare the following detailed CEMP:

workers' accommodation plan, occupational health and safety plan, emergency response plan, traffic management plan, waste disposal management plan, and demobilization plan. Key responsibilities for EMP implementation and details of the EMP are detailed below.

**Table 26: Key Responsibilities for EMP Implementation**

| Entity  | Key Responsibilities   |
|---|--|
| TESDA   | <ul style="list-style-type: none"> <li>• Ensure that staff of TESDA are aware of and comply with the Government regulations and requirements on environmental management, permits, reporting, and monitoring.</li> <li>• Liaise with DENR to facilitate the securing of ECCs / CNCs.</li> <li>• Comply with the safeguard related provisions with the project Loan Agreement, Project Administration Manual, and Initial Environmental Examination and Environmental Management Plan</li> </ul>  |
| Project Management Unit                                   | <ul style="list-style-type: none"> <li>• Ensure compliance with loan covenants and ADB SPS (2009)</li> <li>• Coordinate with TTI regional offices in the review and approval of the design and contract awards</li> <li>• Ensure that the project design conforms with international standards for TVET</li> <li>• Ensure that the EMP is included in the bid and contract documents with the Contractor</li> <li>• Liaise with the Regional Office to monitor implementation of the EMP by the Contractor</li> <li>• Prepare semi-annual environment monitoring reports on EMP implementation to ADB.</li> <li>• Coordinate the securing of licenses and permits and ensure that Contractors will implement the environmental management plan (EMP) of the project</li> <li>• Provide relevant information on the operation and environmental performance of the existing TTI facilities that includes DENR permits (ECC or CNC and other applicable permits) monitoring reports, and facility layout.</li> <li>• For TTIs that will be rehabilitated, Safeguards Focal of each TTI to complete the Environmental Performance Report and Management Plan (EPRMP) as required in securing the Environmental Compliance Certificate (ECC) amendment from the Department of Environment and Natural Resources – Environmental Management Bureau (DENR-EMB) regional office</li> <li>• For TTIs not covered by the Philippine EIS System, Safeguards Focal of each TTI to secure Certificate of Non-coverage (CNC) from the DENR-EMB regional office</li> <li>• Ensure the implementation of EMP and reporting of its compliance is being followed by the Contractor</li> <li>• Establish and disseminate the GRM to TESDA regional office and local government, including contact details of authorized person to receive complaints</li> <li>• Address environment-related concerns through the Grievance Redress Mechanism (GRM) set-up for the project</li> </ul> |
| Project Management Consulting Firm                        | <ul style="list-style-type: none"> <li>• Support PMU in the project implementation.</li> <li>• Ensure compliance with loan covenants and ADB SPS (2009)</li> <li>• The environment safeguards specialist under the PMC to develop a capacity building program in environmental assessment and management to train and provide capacity support to TESDA, PMU, and Contractors</li> </ul>   |
| Design and Construction Supervision Consulting (DSC) Firm | <ul style="list-style-type: none"> <li>• The Firm will be responsible for the incorporation of the climate resilient design in architectural and engineering designs (architectural, structural, electrical, mechanical, plumbing designs) for new construction and repair</li> <li>• Screening of asbestos risks of facilities to be demolished and rehabilitated and develop asbestos risk management plan</li> <li>• Assign an environment, health and safety officer who will supervise the work of the Contractor in completing the EPRMP / PD as required in securing the ECC amendment / CNC from the DENR-EMB regional office</li> <li>• Ensure compliance with loan covenants and ADB SPS (2009).</li> <li>• Ensure the construction of facilities conforms with the approved building design</li> <li>• Ensure the implementation of EMP and reporting of its compliance is being followed by the Contractor</li> <li>• Review the environment monitoring reports submitted by the Contractor prior to submission to PMU of TESDA</li> </ul>   |
| Contractors   | <ul style="list-style-type: none"> <li>• Ensure compliance with relevant design standards for TVET facilities based on the National Building Code, international standards and other related TESDA administrative orders, circulars, and guidelines.</li> </ul>  |

| Entity | Key Responsibilities  |
|--------|---|
|        | <ul style="list-style-type: none"> <li>• Secure the ECC (or ECC Addendum) or CNC from the concerned DENR-EMB regional office in coordination with the RPMU.</li> <li>• Secure the Building Permit, Sanitary Permit, Electrical Permit, and other clearances from the local government prior to start of construction works.</li> <li>• Implement the asbestos risk management plan developed by DSC Firm</li> <li>• Secure the Fire Safety Evaluation Clearance from the city/municipal Fire Marshal prior to start of construction.</li> <li>• Conduct air, water, and noise monitoring during construction phase.</li> <li>• Prepare the requirements for the requisite permits in close coordination with the TTI.</li> <li>• Assign qualified EHS staff at the construction site to supervise and monitor the EMP</li> <li>• Secure a Fire Safety Inspection Certificate from the city/municipal Fire Marshal.</li> <li>• Secure an Occupancy Permit from the local government</li> <li>• Submit a completion report with as-built drawings to TESDA regional office during turn-over.</li> </ul> |

## **VIII. CONCLUSION AND RECOMMENDATION**

158. The results of the initial evaluation for the rehabilitation of TTIs and construction of innovation centers in the 17 regions, show that based on the preliminary design, location and environmental conditions, the anticipated environmental impacts will be primarily related to geologic hazards, natural hazards, flooding risks, climate change impacts and impacts on biodiversity and loss of trees. Construction phase impacts are considered typical for similar buildings, and mainly involved disturbance of land and soil condition, generation of wastes from rehabilitated TTIs and construction of innovation centers, and impact on air quality and noise level, surface water quality, loss of vegetation, reduced water supply from ground water, temporary disturbance of access, increased level of use of water, increased level of vehicle traffic, and health and safety of workers and the community. During operation, major impacts include climate change while medium for generation of solid wastes from TVET activities, potential deterioration of water quality, additional strain to existing water resource, traffic generation, increase in level of particulate matter, deterioration of water quality, reduced water supply from groundwater, and risks of students and workers from handling equipment.

159. Mitigating measures were proposed and incorporated in the environmental management plan to lessen the identified risks. Stakeholders from TESDA were favorable of the project since the expected benefits far outweighed the anticipated impacts. Overall, the project is expected to bring beneficial impacts to TTIs in the 17 regions on a wider scale in terms of enhancing the quality of vocational education in the Philippines.

### Region II – Cagayan

## APPENDIX 3: FLOOD HAZARDS

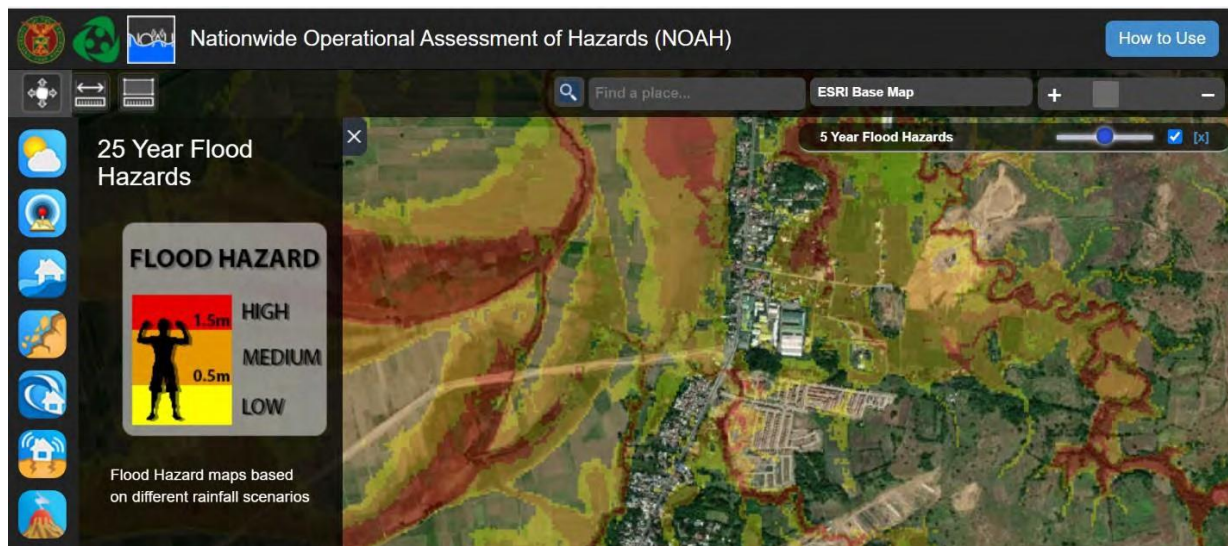

Figure 3. Regional Training Center Tuguegarao - 5-year flood hazards (low to medium, <0.5 m to 1.5m)

## Section 6: Employer's Requirements

### **ANNEX G**

#### **Minimum Requirements for Rehabilitation / Renovation Works**

Design and Build of SIPTVETS-RTIC with Rehabilitation Works in RTC-Tuguegarao, Cagayan

The civil works will also encompass the **rehabilitation and renovation** of specific buildings and/or spaces within the TTI or RTIC complex.

The attached table / list provides the minimum requirements and scope of work for the rehabilitation / renovation works within the project. The location for rehabilitation / renovations works will be at the **Refrigeration and Air-conditioning (RAC) / Carpentry Building of RTC-Tuguegarao, Cagayan**

The design and build contractor is responsible for ensuring the satisfactory execution of all necessary work to prepare for use and strictly adhere to the submitted and approved plans (signed and sealed), specifications, codes, LGU ordinances, permits, and other related contract documents.

After inspection and consultation with the focal persons of the RTICs per site, the bidder/contractor will include the following items for renovation in their proposal/bid.

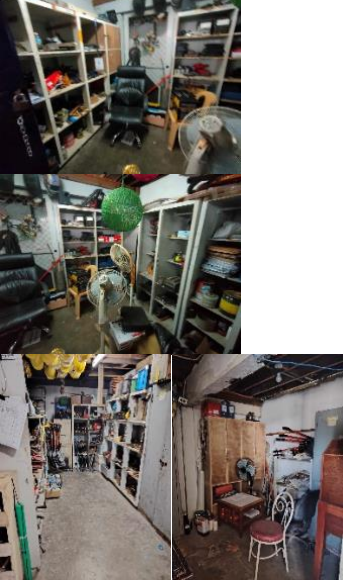

Location at RTC- Tuguegarao, Cagayan:

**Refrigeration and Air-conditioning (RAC) / Carpentry Bldg. RTC, Carig Norte, Tuguegarao**

The contractor is expected to provide all the necessary proposal to complete the design, ready for use, occupancy and complying with the latest Philippine Codes and Laws. The attached list and information should act as a guide only for further site verification and detailing.

All Contractors submitting proposal for this project shall first examine the site/location or spaces, to verify and investigate the existing conditions affecting the Work and submit proposed solutions of anticipated problems to the Employer, TESDA (Owner).

No claim for extra compensation by the Contractor shall be entertained by the Employer, TESDA (Owner) for negligence or inadvertence on the Contractor's part in obtaining all necessary and pertinent data from the site.
